

Compilation of FFmpeg 3.4.1 in Windows 10

Thanks to Сергей Д. (Sergey D.), that point, in the russian OpenMeetings list, to:

<http://www.thingsiuse.org/2014/06/building-ffmpeg-for-h264-and-aac.html>

...in which i based to make this tutorial. Compile ffmpeg with fdk-aac and x264 in Windows 10. It is tested and works right on OpenMeetings 4.0.1. Please, download an install 7-Zip compresor.

Starting...

1)

Please, make a folder called **ffb** in the root drive C: or the yours.

Would look so:

C:\ffb

2)

Will download the necessary base to compile (71mb size):

http://xhmikosr.1f0.de/tools/msys/MSYS_MinGW-w64_GCC_710_x86-x64_Full.7z

Uncompress this file, and inside is a folder called **MSYS**, move it to C:\ffb. The path will look so:

C:\ffb\MSYS

We browse to there and launch the msys.bat file:

C:\ffb\MSYS\msys.bat

...will open a terminal and automatically will create two folders called **home** and other which name is your OS user name. Will look so:

C:\ffb\MSYS\home\your-username

3)

Download the files and move them to C:\ffb\MSYS\home\your-username:

<https://sourceforge.net/projects/lame/files/lame/3.100/lame-3.100.tar.gz/download>

<https://sourceforge.net/projects/opencore-amr/files/fdk-aac/fdk-aac-0.1.5.tar.gz/download>

<https://download.videolan.org/pub/x264/snapshots/x264-snapshot-20171217-2245-stable.tar.bz2>

<http://ffmpeg.org/releases/ffmpeg-3.4.1.tar.bz2>

...remember move them...

4)

We start to compile.

Please clic on C:\ffb\MSYS\msys.bat file, if the terminal it is not open, and copy and paste:

----- Lame -----

tar xvzf lame-3.100.tar.gz

cd ~/lame-3.100

(Only one line with space between both)

./configure --prefix=/usr/local/x86_64-w64-mingw32 --host=x86_64-w64-mingw32 --enable-static
--disable-shared --disable-decoder --enable-nasm

make clean && make

make install

cd ~

----- Fdk-aac -----

```
tar xvzf fdk-aac-0.1.5.tar.gz
```

```
cd ~/fdk-aac-0.1.5
```

(Only one line without space between both)

```
./configure --prefix=/usr/local/x86_64-w64-mingw32 --host=x86_64-w64-mingw32 --enable-shared=no
```

```
make clean && make
```

```
make install
```

```
cd ~
```

----- X-264 -----

```
tar xvjf x264-snapshot-20171217-2245-stable.tar.bz2
```

```
cd ~/x264-snapshot-20171217-2245-stable
```

(Only one line without space between both)

```
./configure --prefix=/usr/local/x86_64-w64-mingw32 --cross-prefix=x86_64-w64-mingw32-  
--host=x86_64-w64-mingw32 --enable-static --bit-depth=8 --enable-win32thread
```

```
make clean && make
```

```
make install
```

```
cd ~
```

----- FFmpeg -----

```
tar xvjf ffmpeg-3.4.1.tar.bz2
```

```
cd ~/ffmpeg-3.4.1
```

(Only one line. The red text is one command. Lines 3 and 4, and 4 and 5 with space)

```
CPPFLAGS="$CPPFLAGS -I/usr/local/x86_64-w64-mingw32/include" ./configure --extra-  
ldflags='-L/usr/local/x86_64-w64-mingw32/lib' --prefix=/usr/local/x86_64-w64-mingw32 --cross-  
prefix=x86_64-w64-mingw32- --target-os=mingw32 --enable-w32threads --arch=x86_64  
--enable-runtime-cpudetect --disable-debug --enable-static --disable-shared --disable-ffplay  
--disable-ffserver --enable-gpl --enable-version3 --enable-nonfree --enable-libmp3lame --enable-  
libfdk-aac --enable-libx264
```

`make clean && make`

`make install`

`cd ~`

....Ffmpeg Compilation is Finished..

You can find the compiled files in:

`C:\ffb\MSYS\local\x86_64-w64-mingw32`

...they are: `ffmpeg.exe`, `ffprobe.exe`, `lame.exe` and `x264.exe`

Now you can copy and put them in `C:\ffmpg` ...for example, for OpenMeetings.

When you are in OpenMeetings, remember type that ffmpeg path in:

Administration ==> Configuration ==> ffmpg_path

And this is all.

If you have some doubt or question, please raise it in the Apache OpenMeetings forums:

<http://openmeetings.apache.org/mail-lists.html>

Thank you.

Alvaro Bustos
