

## **Installation of Apache OpenMeetings 3.0.x on Fedora 22 – 64bit**

This tutorial it is bassed on a fresh installation of

**Fedora-Live-MATE\_Compiz-x86\_64-22-3.iso**

It is tested with positive result.  
We will use the Apache's binary version  
OpenMeetings 3.0.6 stable,  
that is to say should suppress his compilation.

It is done step by step.

1-6-2015

Starting...

**1)**

At first place modify Selinux level security for the installation.

[\*\*sudo nano /etc/selinux/config\*\*](#)

...modify:

**SELINUX=enforcing**

...to

**SELINUX=permissive**

When finish the installation you can back to enforcing level.

**2)**

**----- Update Operative System -----**

Update operative system:

**dnf update -y**

...and reboot for kernel changes if it is:

**reboot**

**3)**

Install wget:

**sudo dnf -y install wget**

**4)**

**----- ADD Repos -----**

**## RPM Fusion repo ##**

(In only one line)

**su -c 'dnf install --nogpgcheck http://download1.rpmfusion.org/free/fedora/rpmfusion-free-release-22.noarch.rpm http://download1.rpmfusion.org/nonfree/fedora/rpmfusion-nonfree-release-22.noarch.rpm'**

## Adobe repo 64-bit x86\_64 ## For Flash player.

```
rpm -ivh http://linuxdownload.adobe.com/adobe-release/adobe-release-x86\_64-1.0-1.noarch.rpm
```

```
rpm --import /etc/pki/rpm-gpg/RPM-GPG-KEY-adobe-linux
```

Fast searches repos:

```
sudo dnf -y install yum-plugin-fastestmirror
```

```
dnf update -y
```

5)

#### ----- Installation of packages and libraries -----

Should install packages and libraries necessary:

(In only one line with one space)

```
dnf install -y libjpeg-turbo libjpeg-turbo-devel libjpeg-turbo-utils giflib-devel freetype-devel gcc-c++ zlib-devel libtool bison bison-devel file-roller ghostscript freetype unzip gcc ncurses make bzip2 wget ImageMagick ghostscript ncurses zlib git make automake nasm pavucontrol alsaplugins-pulseaudio flash-plugin icedtea-web nmap tomcat-native
```

6)

#### ----- Installation of LibreOffice or OpenOffice -----

LibreOffice it is installed already in the distro, but if you use a server iso then install it:

```
dnf -y install libreoffice
```

Is need it to convert uploaded files.

7)

#### ----- Installation of Java -----

Java it is necessary to run red5-OpenMeetings. We'll install it, if not, OpenJava.

```
dnf -y install java
```

8)

----- Installation MariaDB database server -----

MariaDB is the new database server folk of MySQL.

We install it:

```
dnf install -y mariadb mariadb-server
```

...and starting mariadb:

```
systemctl start mariadb.service
```

Give a password to mariadb root admin:

```
mysqladmin -u root password new-password
```

Make a database for OpenMeetings:

```
mysql -u root -p
```

...will ask for the root password we does just now:

```
CREATE DATABASE open306 DEFAULT CHARACTER SET 'utf8';
```

...now do a new user with a new password:

```
CREATE USER 'hola'@'localhost' IDENTIFIED BY '123456';
```

...and give privileges to this user on the open306 database:

```
GRANT ALL PRIVILEGES ON open306.* TO 'hola'@'localhost' WITH GRANT OPTION;
```

```
FLUSH PRIVILEGES;
```

```
quit
```

open306 ..... name of the database  
hola ..... user for that database  
123456 ..... password of that user

To start, restart and stop mariadb:

```
systemctl start mariadb.service  
systemctl restart mariadb.service  
systemctl stop mariadb.service
```

9)

----- **ImageMagick** -----

We had installed ImageMagick in the beginning.  
Will work with png, jpg, gif, etc files.

10)

----- **Sox** -----

Sox work about sound. Install it:

```
dnf -y install sox
```

11)

----- **Swftools** -----

Swftools participate in convert uploaded files to swf and show them in the whiteboard.

Will compile it:

```
cd /opt  
wget http://www.swftools.org/swftools-2013-04-09-1007.tar.gz  
tar xzvf swftools-2013-04-09-1007.tar.gz  
cd /opt/swftools-2013-04-09-1007  
.configure --libdir=/usr/lib --bindir=/usr/bin  
make  
make install  
cd /opt
```

12)

----- **Compile and installation of ffmpeg, lame, yasm and x264-----**

To compile and install ffmpeg, lame, yasm and x264, i made my own mixture between these two web pages:

<https://trac.ffmpeg.org/wiki/CompilationGuide/Centos>

<http://wiki.razuna.com/display/ecp/FFMpeg+Installation+on+CentOS+and+RedHat>

Should install some package and libraries: (In only one line)

dnf install -y glibc alsa-lib-devel faac faac-devel faad2 faad2-devel gsm gsm-devel imlib2 imlib2-devel libogg libvorbis vorbis-tools theora-tools libvpx-devel

Ffmpeg will work with the video. Starting...

Please copy and past as it is, do not any change.

mkdir ~/ffmpeg\_sources

cd ~/ffmpeg\_sources

First will download all the packages we need to compile. In shell as root:

curl -L -O <http://downloads.sourceforge.net/project/lame/lame/3.99/lame-3.99.5.tar.gz>

git clone --depth 1 <git://git.code.sf.net/p/opencore-amr/fdk-aac>

curl -O <http://downloads.xiph.org/releases/opus/opus-1.1.tar.gz>

wget <http://downloads.xvid.org/downloads/xvidcore-1.3.2.tar.gz>

wget <http://downloads.xiph.org/releases/ogg/libogg-1.3.1.tar.gz>

wget <http://downloads.xiph.org/releases/vorbis/libvorbis-1.3.4.tar.gz>

wget <http://downloads.xiph.org/releases/theora/libtheora-1.1.1.tar.gz>

wget <http://www.tortall.net/projects/yasm/releases/yasm-1.2.0.tar.gz>

git clone <http://git.chromium.org/webm/libvpx.git>

git clone <git://git.videolan.org/x264.git>

git clone <git://source.ffmpeg.org/ffmpeg.git>

...once all these packages-files are downloaded start the compilation...please be connected Internet.

**1) ---- libmp3lame ----**

```
cd ~/ffmpeg_sources  
tar xzvf lame-3.99.5.tar.gz  
cd lame-3.99.5
```

(In only one line)

```
./configure --prefix="$HOME/ffmpeg_build" --bindir="$HOME/bin" --disable-shared --enable-nasm
```

```
make  
make install  
make distclean
```

**2) ---- libfdk\_aac ----**

```
cd ~/ffmpeg_sources  
cd fdk-aac  
autoreconf -fiv  
./configure --prefix="$HOME/ffmpeg_build" --disable-shared  
make  
make install  
make distclean
```

**3) ---- libopus ----**

```
cd ~/ffmpeg_sources  
tar xzvf opus-1.1.tar.gz  
cd opus-1.1  
./configure --prefix="$HOME/ffmpeg_build" --disable-shared
```

```
make  
make install  
make distclean
```

**4) ---- Xvid ----**

```
cd ~/ffmpeg_sources  
tar xzvf xvidcore-1.3.2.tar.gz  
cd xvidcore/build/generic  
.configure --prefix="$HOME/ffmpeg_build"  
make  
make install
```

**5) ---- LibOgg ----**

```
cd ~/ffmpeg_sources  
tar xzvf libogg-1.3.1.tar.gz  
cd libogg-1.3.1  
.configure --prefix="$HOME/ffmpeg_build" --disable-shared  
make  
make install
```

**6) ---- Libvorbis ----**

```
cd ~/ffmpeg_sources  
tar xzvf libvorbis-1.3.4.tar.gz  
cd libvorbis-1.3.4  
.configure --prefix="$HOME/ffmpeg_build" --with-ogg="$HOME/ffmpeg_build" --disable-shared  
make  
make install
```

**7) ---- Libtheora ----**

```
cd ~/ffmpeg_sources  
tar xzvf libtheora-1.1.1.tar.gz  
cd libtheora-1.1.1  
  
(In only one line)  
.configure --prefix="$HOME/ffmpeg_build" --with-ogg="$HOME/ffmpeg_build" --disable-examples --disable-shared --disable-sdltest --disable-vorbistest  
make  
make install
```

**8) ---- Yasm ----**

```
dnf remove yasm  
cd ~/ffmpeg_sources  
tar xzfv yasm-1.2.0.tar.gz  
cd yasm-1.2.0  
.configure --prefix="$HOME/ffmpeg_build" --bindir="$HOME/bin"  
make  
make install  
export "PATH=$PATH:$HOME/bin"
```

**9) ---- Libvpx ----**

```
cd ~/ffmpeg_sources  
cd libvpx  
.configure --prefix="$HOME/ffmpeg_build" --disable-examples  
make  
make install
```

**10) ---- X264 ----**

```
cd ~/ffmpeg_sources  
cd x264  
.configure --prefix="$HOME/ffmpeg_build" --bindir="$HOME/bin" --enable-static  
make  
make install
```

**### Config Libraries ###**

```
export LD_LIBRARY_PATH=/usr/local/lib/  
echo /usr/local/lib >> /etc/ld.so.conf.d/custom-libs.conf  
ldconfig
```

**11) ---- FFmpeg ----**

```
cd ~/ffmpeg_sources  
cd ffmpeg  
git checkout release/2.2  
PKG_CONFIG_PATH="$HOME/ffmpeg_build/lib/pkgconfig"  
export PKG_CONFIG_PATH
```

**(In only one line with a space between each one)**

```
./configure --prefix="$HOME/ffmpeg_build" --extra-cflags="-I$HOME/ffmpeg_build/include"  
--extra-ldflags="-L$HOME/ffmpeg_build/lib" --bindir="$HOME/bin" --extra-libs=-lfdk_gpl  
--enable-nonfree --enable-libfdk_aac --enable-libmp3lame --enable-libopus --enable-libvorbis  
--enable-libvpx --enable-libx264 --enable-libtheora --enable-libxvid
```

```
make  
make install
```

The compilation is finished.

Now we have the compiled files in: ~/bin

Should copy all them to /usr/local/bin to be enabled:

```
cd ~/bin
```

```
cp ffmpeg ffprobe ffserver lame vsyasm x264 yasm ytasm /usr/local/bin
```

13)

----- **Jodconverter** -----

We need Jodconverter in the process to convert the uploaded files.

```
cd /opt
```

```
wget http://jodconverter.googlecode.com/files/jodconverter-core-3.0-beta-4-dist.zip
```

```
unzip jodconverter-core-3.0-beta-4-dist.zip
```

14)

----- **Installation of Apache OpenMeetings** -----

Make a folder called **red5306** where download the Apache OpenMeetings file and where make the installation:..

```
mkdir /opt/red5306
```

This url that you can visit, is the Apache OpenMeetings 3.0.6 stable version:

<http://openmeetings.apache.org/downloads.html>

```
cd /opt/red5306
```

Here i leave two valids examples links to choose download:

```
wget http://apache.rediris.es/openmeetings/3.0.6/bin/apache-openmeetings-3.0.6.zip
```

...or

```
wget http://ftp.cixug.es/apache/openmeetings/3.0.6/bin/apache-openmeetings-3.0.6.zip
```

unzip apache-openmeetings-3.0.6.zip

...save the original file to /opt:

```
mv apache-openmeetings-3.0.6.zip /opt
```

15)

## ---- Connector Java MariaDB ----

This file is need it to connect OpenMeetings with MariaDB:

cd /opt (In only one line)

```
 wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.35/mysql-connector-java-5.1.35.jar
```

```
cp mysql-connector-java-5.1.35.jar /opt/red5306/webapps/openmeetings/WEB-INF/lib
```

and do to **nobody** owner of OpenMeetings:

```
chown -R nobody /opt/red5306
```

16)

----- Configuration of OpenMeetings for MariaDB -----

Will configure OpenMeetings to connect with MariaDB:

```
cd /opt/red5306/webapps/openmeetings/WEB-INF/classes/META-INF
```

```
mv persistence.xml persistence.xml-ori
```

```
mv mysql_persistence.xml persistence.xml
```

`cd /opt`

```
sudo nano /opt/red5306/webapps/openmeetings/WEB-INF/classes/META-INF/persistence.xml
```

...and modify **line 78**:

Url=jdbc:mysql://localhost:3306/openmeetings?.....

to

Url=jdbc:mysql://localhost:3306/open306?....

...**open306** is the database name we gives when install MariaDB and build it.

Modify also **lines 83 and 84**:

```
, Username=root  
, Password=" />
```

...to

```
, Username=hola  
, Password=123456" />
```

...**hola** is the user name we gives when install MariaDB for **open306** database.

... **123456** is the password for **hola** user.

If you choose any other database name, user name or password here is where to change.

Protect the access to this file:

```
chmod 640 /opt/red5306/webapps/openmeetings/WEB-INF/classes/META-INF/persistence.xml
```

17)

#### ---- Script to launch red5-OpenMeetings ----

Build a script to start and stop red5-OpenMeetings, that we'll call **red5**

```
sudo nano /etc/init.d/red5
```

...copy and past the text **from here**:

```

#!/bin/bash
# For RedHat and cousins:
# chkconfig: 2345 85 85
# description: Red5 flash streaming server
# processname: red5
# Created By: Sohail Riaz (sohaileo@gmail.com)

PROG=red5
RED5_HOME=/opt/red5306
DAEMON=$RED5_HOME/$PROG.sh
PIDFILE=/var/run/$PROG.pid

# Source function library
. /etc/rc.d/init.d/functions

[ -r /etc/sysconfig/red5 ] && . /etc/sysconfig/red5

RETVAL=0

case "$1" in
    start)
        echo -n $"Starting $PROG: "
        cd $RED5_HOME
        $DAEMON >/dev/null 2>/dev/null &
        RETVAL=$?
        if [ $RETVAL -eq 0 ]; then
            echo $! > $PIDFILE
            touch /var/lock/subsys/$PROG
        fi
        [ $RETVAL -eq 0 ] && success $"$PROG startup" || failure $"$PROG startup"
        echo
        ;;
    stop)
        echo -n $"Shutting down $PROG: "
        killproc -p $PIDFILE
        RETVAL=$?
        echo
        [ $RETVAL -eq 0 ] && rm -f /var/lock/subsys/$PROG
        ;;
    restart)
        $0 stop
        $0 start
        ;;
    status)
        status $PROG -p $PIDFILE
        RETVAL=$?
        ;;
    *)
        echo $"Usage: $0 {start|stop|restart|status}"
        RETVAL=1
esac

```

exit \$REVAL

**...to here.**

If you made the installation in any other path, can modify the line:

RED5\_HOME=/opt/red5306

...to

RED5\_HOME=/your-path-installation

Concede permission of execution to the script:

chmod +x /etc/init.d/red5

systemctl stop mariadb.service

...reboot machine in order the system recognize the script:

reboot

**18)**

After reboot we continue. Run mariadb:

systemctl start mariadb.service

...and red5-OpenMeetings:

/etc/init.d/red5 start

...wait some *longs* seconds and later go with browser to:

<http://localhost:5080/openmeetings/install>

...there will have to appear a page similar to this one:

## OpenMeetings

### OpenMeetings - Installation

**1. Enabling Image Upload and import to whiteboard**

- o Install **ImageMagick** on the server, you can get more information on <http://www.imagemagick.org> regarding installation. The instructions for installation can be found there <http://www.imagemagick.org/script/binary-releases.php>, however on most linux systems you can get it via your favorite package managers (apt-get it)

**2. Enabling import of PDFs into whiteboard**

- o Install **GhostScript** on the server, you can get more information on <http://pages.cs.wisc.edu/~ghost/> regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it).
- o Install **SWFTools** on the server, you can get more information on <http://www.swf-tools.org/> regarding installation. Some of the Linux distributions already have it in their package manager see <http://packages.debian.org/unstable/utils/swf-tools>, the recommended version of **SWFTools** is 0.9 as prior version have a bug that does lead to wrong object dimensions in the Whiteboard

**3. Enabling import of .doc, .docx, .ppt, .pptx, ... all Office Documents into whitebaord**

- o **OpenOffice-Service** started and listening on port 8100, see [OpenOfficeConverter](#) for details

**4. Enabling Recording and import of .avi, .flv, .mov and .mp4 into whiteboard**

- o Install **FFMpeg**. You should get FFMPEG in an up to date copy! For Windows you can download a Build for example from <http://ffmpeg.arrozcru.org/builds/> Linux or OSx Users should be able to use one of the various Installation Instructions on the Web. You need to enable libmp3lame!

...click **Next** button in the foot page, and will show the database configuration we made:

## OpenMeetings

### OpenMeetings - Installation

**DB configuration**

**Recommendation for production environment**

By default OpenMeetings uses the integrated Apache Derby database. For production environment you should consider using MySQL, PostgreSQL, IBM DB2, MSSQL or Oracle

<b>Choose DB type</b>	<input type="text" value="MySQL"/>
<b>Specify DB host</b>	<input type="text" value="localhost"/>
<b>Specify DB port</b>	<input type="text" value="3306"/>
<b>Specify the name of the database</b>	<input type="text"/>
<b>Specify DB user</b>	<input type="text"/>
<b>Specify DB password</b>	<input type="text"/>
<input type="button" value="Check"/>	

**< Previous** **Next >** **Last** **Finish**

...clic **Next** again:

## OpenMeetings

### OpenMeetings - Installation

**Userdata**

Username	<input type="text"/>
Userpass	<input type="password"/>
EMail	<input type="text"/>
User Time Zone	<input type="text" value="Europe/Madrid"/>

**Organisation(Domains)**

Name	<input type="text"/>
------	----------------------

...here we must to introduce necessaryly, to be able to continue, the following:

Username = **a-name** ...This user name will have administrator rights.  
 Userpass = **a-password** ....for the previous user  
 EMail = **email-adress** ...of the previous user.  
 User Time Zone = Select your geographyc situation  
 Name = **example-openmeetings** ...group name to choose

After finish the compleat installation we'll configure the rest.

...click **Last** button and this other page will appear:

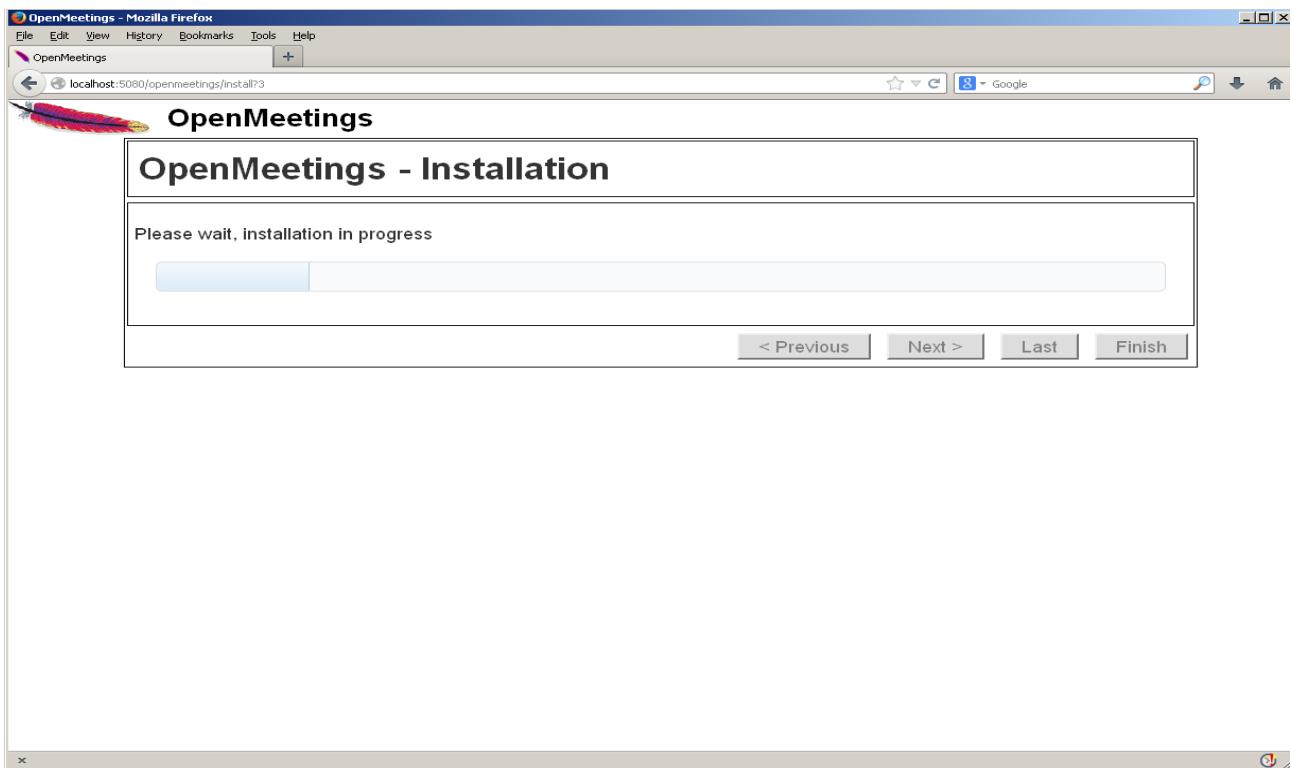

## OpenMeetings

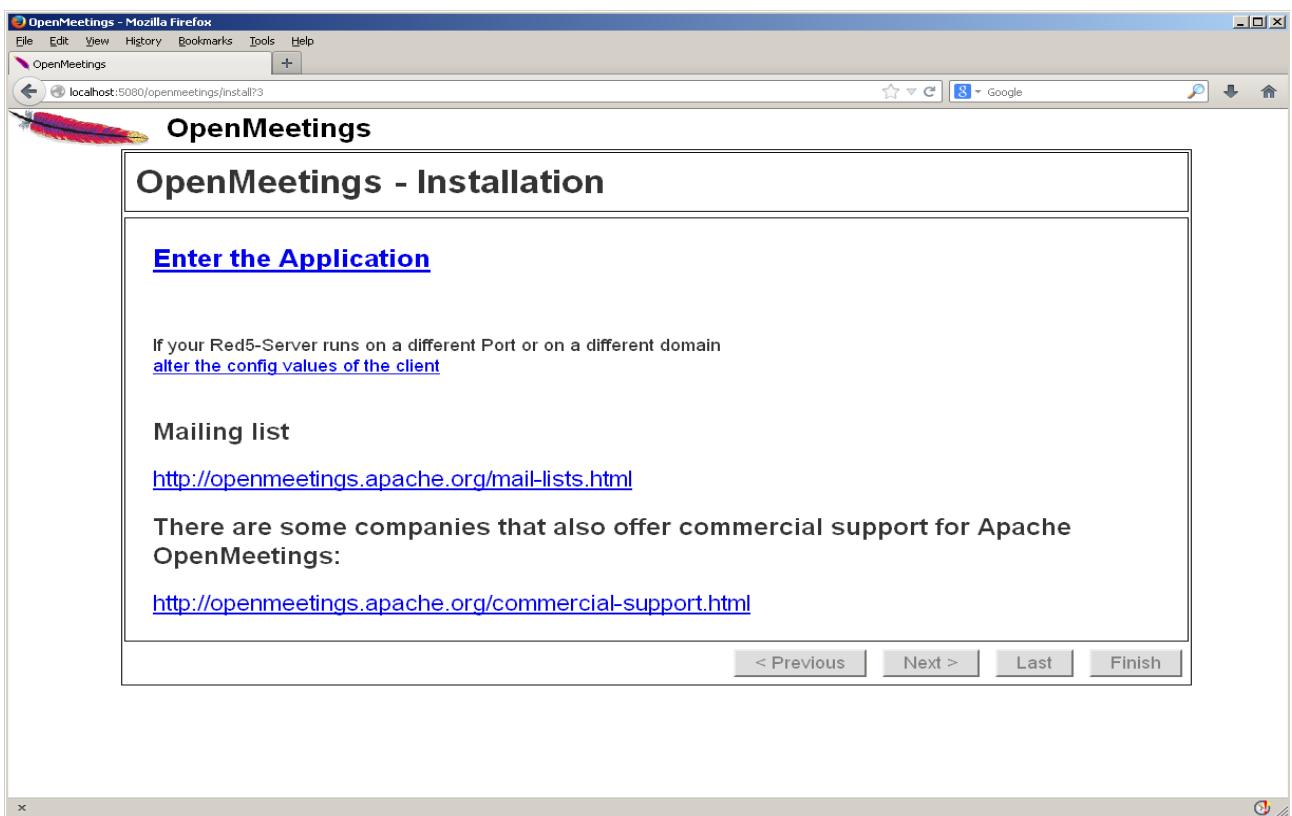

### OpenMeetings - Installation

Please click "Finish" button to start installation!

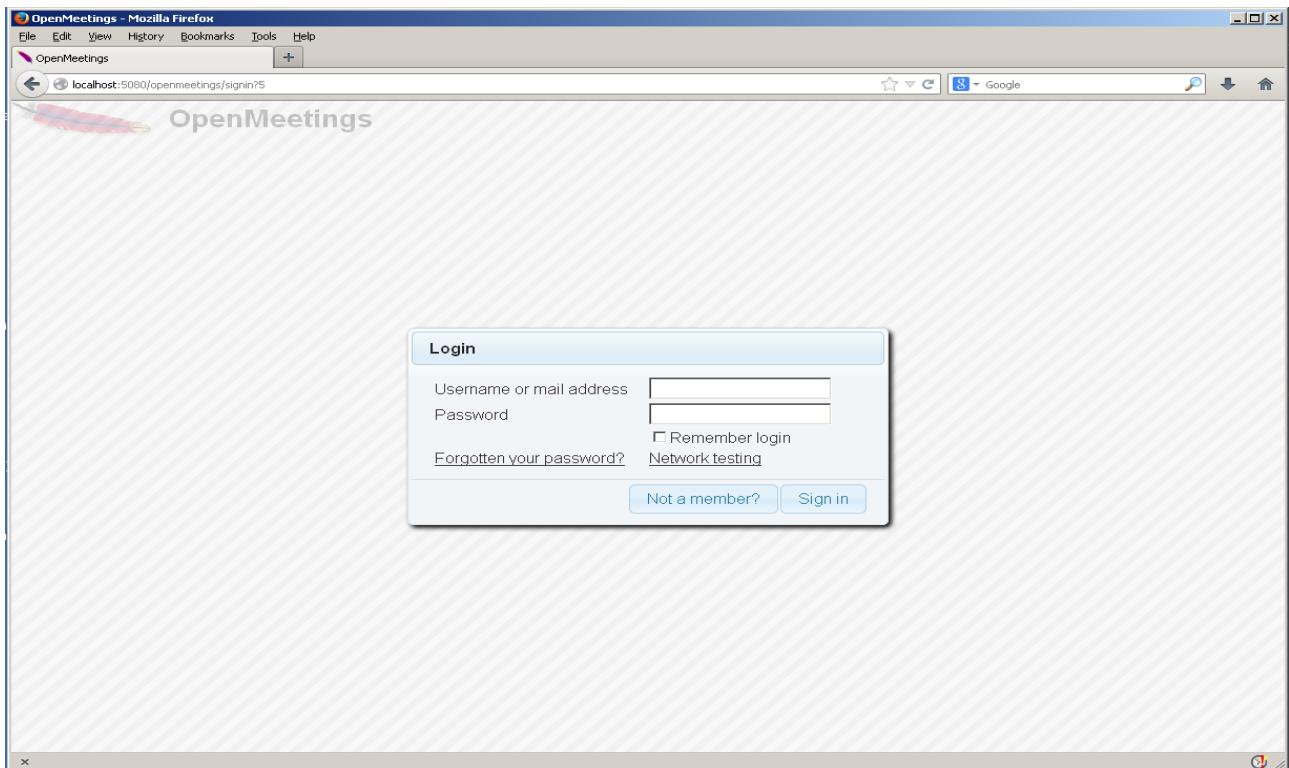

...click **Finish** and will start to fill the database tables:

When finish should show this page:

...click Enter the Application and you'll see OpenMeetings's login page...

Introduce the user's name and the password that you have chosen during the installation and clic **Sign in...**

**Congratulations!**

The next time to access OpenMeetings will be:

<http://localhost:5080/openmeetings>

Remember open in the server these three ports:

**1935    5080    8088**

...in order can accede to OpenMeetings from other machines in Lan or Internet.

**19)**

#### ---- Configuration of OpenMeetings ----

Once you acceded to OpenMeetings we go to: **Administration → Configuration**

The screenshot shows the OpenMeetings user interface. On the left, under 'Welcome', it says 'Hello firstname lastname' with a placeholder icon. A red arrow points upwards from the bottom of this section towards the top of the page. To the right, there's a 'How to conference' section with four steps: 1. Press start, 2. Choose room, 3. Check setup, 4. Start conference. Below these steps is a brief description of OpenMeetings and two buttons: 'START' and 'Calendar'. At the bottom left, there's a 'My rooms' section listing 'My conference room (for 1-16 users)' and 'My webinar room (for 1-120 users)'. Each room entry has an 'Enter' button.

...introduce the path for files conversion, audio and video:

The screenshot shows the OpenMeetings administration configuration page. On the left, there's a table titled 'Configuration' with columns for ID, Key, and Value. The table lists various system settings like 'default\_group\_id', 'smtp\_server', etc. A red arrow labeled '1' points to the 'ffmpeg\_path' row, which has the value '/usr/local/bin'. To the right of the table, there's a detailed view of the 'ffmpeg\_path' entry with fields for 'Key' (set to 'ffmpeg\_path'), 'Value' (set to '/usr/local/bin'), 'Last update', 'Updated by', and 'Comment' (set to 'Path To FFMPEG'). Red arrows labeled '2' and '3' point to the 'Value' field and the 'Comment' field respectively.

ID	Key	Value
4	default_group_id	1
5	default_domain_id	1
6	smtp_server	localhost
7	smtp_port	25
8	system_email_addr	noreply@openmeetings.apache.org
9	email_username	
10	email_userpass	
11	mail.smtp.starttls.enabled	0
12	mail.smtp.connection.timeout	30000
13	mail.smtp.timeout	30000
14	application.name	OpenMeetings
15	default_lang_id	1
16	swftools_zoom	100
17	swftools_jpegquality	85
18	swftools_path	
19	imagemagick_path	
20	sox_path	
21	ffmpeg_path	/usr/local/bin
22	office.path	
23	jod.path	/opt/jod/lib
24	rss_feed1	http://mail-archives.apache.org/mod_mbox/openmeetings-user/Format-atom

Click on: **swftools\_path** ...and to up right in **Value** type: [/usr/bin](#)

Click on: **imagemagick\_path** ...and to up right in **Value** type: [/usr/bin](#)

Click on: **sox\_path** ...and to up right in **Value** type: [/usr/bin](#)

Click on: **ffmpeg\_path** ...and to up right in **Value** type: [/usr/local/bin](#)

Click on: **office.path** ...and to up right in **Value** type: [/usr/lib64/libreoffice](#)

Click on: **jod.path** ...and to up right in **Value** type: [/opt/jodconverter-core-3.0-beta-4/lib](#)

Remember to do the number 3 on picture to save each change.

To stop red5-OpenMeetings: [/etc/init.d/red5 stop](#)

**Flash Player** it was installed in the beginning. OpenMeetings even need it for rooms.

And this is all.

---

If you have some doubt or question please expose it in Apache OpenMeetings forums:

<http://openmeetings.apache.org/mail-lists.html>

Thank you

Alvaro Bustos
