

Installation of Apache OpenMeetings 3.2.0 on Gentoo

This tutorial is based on a fresh installations on

stage3-amd64-20170202.tar.bz2

It is tested with positive result. We will use the Apache's binary version OpenMeetings 3.2.0 stable, that is to say will suppress his compilation. It is done step by step.

17-2-2017

Please, be connected to Internet during all the process tu run any server.

Starting...

1)

----- Update Operative System ------

Open a terminal as root:

su

...will ask for root password, and we update the operative system:

emerge -uaD world

2)

----- Installation of Oracle Java 1.8 -----

Java 1.8 it is necessary for OpenMeetings 3.2.0. We'll install Oracle Java.

cd /usr/portage/distfiles

...download the java file:

(All in one line only. 1^a and 2^a without space between them. A space to the 3^a. Together 3^a and 4^a)

wget --no-cookies --no-check-certificate --header "Cookie: gpw_e24=http%3A%2F %2Fwww.oracle.com%2F; oraclelicense=accept-securebackup-cookie" http://download.oracle.com/otn-pub/java/jdk/8u121-b13/e9e7ea248e2c4826b92b3f075a80e441/jdk-8u121-linux-x64.tar.gz

...we install it:

emerge --verbose dev-java/oracle-jdk-bin:1.8

...maybe you have installed various versions of Java. We see it:

java-config -list-available-vms

...select the just installed Oracle Java:

java-config --set-system-vm oracle-jdk-bin-1.8

...and to see the active version:

java -version

3)

----- Installation of LibreOffice ------

OpenMeetings will need LibreOffice to convert to pdf the uploaded office files.

We install it (will spend around 35 minutes):

cd /opt

emerge libreoffice-bin

4)

----- Installation of necessary packages and libraries -----

Will install packages and libraries that we'll need later:

emerge zlib libtool bzip2 autoconf automake pkgconfig tomcat-native nmap freetype nano

5)

----- Installation ImageMagick, Sox and Swftools ------

ImageMagick, will work with images files jpg, png, gif, etc. We install it:

emerge imagemagick

Sox, work the sound. Install it:

emerge sox

Swftools. LibreOffice convert to pdf the uploaded office files, and Swftools convert these pdf to swf (flash file), that later will show in the whiteboard. Also convert jpg2swf, png2swf, gif2swf, etc. After try compile different swftools source versions, get fail in all them. Trying to install from Portage, also gave an error. To avoid it, please run these commands:

nano /etc/portage/package.accept_keywords

...and type, or copy in, this line:

media-gfx/swftools

... press in keyboard Ctrl+y and Enter, to save and exit nano editor.

Now we can install swftools:

emerge swftools

We have swftools installed, but without pdf2swf file, that we need to convert pdf to swf files. To solve it, i've ideaded a way, that without be very orthodox, yes it is effective. It is tested. Please, run these commands:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/swf.zip

...this zip unloaded, contain two files: pdf2swf and libjpeg.so.8.1.2. Both copyed from my Arch Linux installation. Unzipe:

unzip swf.zip

...copy the two files mentioned, to his respective path:

cd swf

cp pdf2swf /usr/bin

cp libjpeg.so.8.1.2 /lib

...and we do a smylelink to libjpeg.so.8.1.2. It is the path that will look for pdf2swf to work: In -s /lib/libjpeg.so.8.1.2 /lib/libjpeg.so.8 cd /opt

6)

----- Installation of Adobe Flash Player -----

OpenMeetings even need Adobe Flash Player for rooms. We install it:

emerge adobe-flash

Prepare this plugin for Firefox. Please, change you-user by your real user name:

mkdir /home/your-user/.mozilla/plugins

In -s /usr/lib64/nsbrowser/plugins/libflashplayer.so /home/su-usuario/.mozilla/plugins

7)

----- Compilation of FFmpeg ------

FFmpeg work with video. Will install a libraries and paquets:

emerge glibc faac faad2 gsm imlib2 cmake curl git mercurial yasm

The ffmpeg compilation it is based on this url, updated file versions 17-2-2017:

https://trac.ffmpeg.org/wiki/CompilationGuide/Centos

I made a script that will download, compile and install ffmpeg. It is tested and works ok. The result of any recordings we do in OpenMeetings, will be in mp4 format.

When the compilation be finished, will appear a text announces it:

FFMPEG Compilation is Finished!

So, download the script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-archlinux.sh

...concede execution permission to it:

chmod +x ffmpeg-archlinux.sh

...and run it (be connected to Internet):

./ffmpeg-archlinux.sh

The compilation will spend around 25 minutes.

When finished, please go to step 8).

But if you prefer, can copy and paste, though i **don't advise.** Leave here the commands script:

nano /opt/ffmpeg-arch.sh

...copy the green text from here:

Script ffmpeg compile for Arch Linux and Gentoo# Alvaro Bustos, thanks to Hunter.# Updated 17-2-2017

Create a temporary directory for sources. SOURCES=\$(mkdir ~/ffmpeg_sources) cd ~/ffmpeg_sources

Download the necessary sources. # git clone --depth 1 git://git.videolan.org/x264 curl -#LO ftp://ftp.videolan.org/pub/x264/snapshots/last_stable_x264.tar.bz2 hg clone https://bitbucket.org/multicoreware/x265 git clone --depth 1 git://git.code.sf.net/p/opencore-amr/fdk-aac curl -L -O http://downloads.sourceforge.net/project/lame/lame/3.99/lame-3.99.5.tar.gz curl -O http://downloads.xiph.org/releases/opus/opus-1.1.3.tar.gz curl -O http://downloads.xiph.org/releases/ogg/libogg-1.3.2.tar.gz curl -O http://downloads.xiph.org/releases/vorbis/libvorbis-1.3.5.tar.gz git clone --depth 1 https://chromium.googlesource.com/webm/libvpx.git git clone --depth 1 git://source.ffmpeg.org/ffmpeg # wget http://ffmpeg.org/releases/ffmpeg-3.1.1.tar.gz # Unpack files
for file in `ls ~/ffmpeg_sources/*.tar.*`; do
tar -xvf \$file
done

cd x264-*/

./configure --prefix="\$HOME/ffmpeg_build" --bindir="\$HOME/bin" --enable-static && make && make install && make distclean; cd ..

cd x265/build/linux cmake -G "Unix Makefiles" -DCMAKE_INSTALL_PREFIX="\$HOME/ffmpeg_build" -DENABLE_SHARED:bool=off ../../source && make && make install; cd ~/ffmpeg_sources

cd fdk-aac

autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg_build" --disable-shared && make && make install && make distclean; cd ..

cd lame-*/

./configure --prefix="\$HOME/ffmpeg_build" --bindir="\$HOME/bin" --disable-shared --enablenasm && make && make install && make distclean; cd ..

cd opus-*/

autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg_build" --disable-shared && make && make install && make distclean; cd ..

cd libogg-*/

./configure --prefix="\$HOME/ffmpeg_build" --disable-shared && make && make install && make distclean; cd ..

cd libvorbis-*/

LDFLAGS="-L\$HOME/ffmeg_build/lib" CPPFLAGS="-I\$HOME/ffmpeg_build/include" ./configure --prefix="\$HOME/ffmpeg_build" --with-ogg="\$HOME/ffmpeg_build" --disable-shared && make && make install && make distclean; cd ..

cd libtheora-*/

./configure --prefix="\$HOME/ffmpeg_build" --with-ogg="\$HOME/ffmpeg_build" --disableexamples --disable-shared --disable-sdltest --disable-vorbistest && make && make install; cd ...

cd libvpx

./configure --prefix="\$HOME/ffmpeg_build" --disable-examples && make && make install && make clean; cd ..

cd ffmpeg

PKG_CONFIG_PATH="\$HOME/ffmpeg_build/lib/pkgconfig" ./configure --prefix="\$HOME/ffmpeg_build" --extra-cflags="-I\$HOME/ffmpeg_build/include" --extraldflags="-L\$HOME/ffmpeg_build/lib" --bindir="\$HOME/bin" --pkg-config-flags="--static" --enable-gpl --enable-nonfree --enable-libfdk_aac --enable-libfreetype --enable-libmp3lame --enable-libopus --enable-libvorbis --enable-libvpx --enable-libx264 --enable-libx265 --enablelibtheora && make && make install && make distclean && hash -r; cd .. cd ~/bin cp ffmpeg ffprobe ffserver lame x264 /usr/local/bin

cd ~/ffmpeg_build/bin

cp x265 /usr/local/bin

echo "FFmpeg Compilation is Finished!"

...to here.

Concede permission of execution:

chmod +x /opt/ffpmeg-arch.sh

cd /opt

Now be connected to Internet, run the script and wait about 30 minutes while the compilation is finished:

./ffmpeg-arch.sh

All the compiled files will be installed in: /usr/local/bin

8)

----- Installation of MariaDB data server -----

MariaDB is the data server. We install it:

emerge mariadb

ATTENTION! When MariaDB installation is finished, a lines before the last, in the shell, is a command tha we need to copy and run. Actually is this, please check it, and if is the same run it:

emerge --config =dev-db/mariadb-10.0.29

...will ask for a new root mariadb password. Choose one you like it and type it twice.

Run MariaDB:

/etc/init.d/mysql start

...and access to MariaDB:

mysql -u root -p

...will ask for the password you does just now.

We make a database called open320, for OpenMeetings:

MariaDB [(none)]> CREATE DATABASE open320 DEFAULT CHARACTER SET 'utf8';

Now we create a user with all permission on this open320 database:

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open320.* TO 'hola'@'localhost' IDENTIFIED BY '123456' WITH GRANT OPTION;

* open320 name of the database * hola user for that database * 123456password of this user

You can change the data, but...remember it! Later we'll need it. We exit MariaDB:

MariaDB [(none)]> quit

9)

----- Installation of OpenMeetings ------

We'll install OpenMeetings in /opt/red5320. All the following information will be based on this directory.

Call to our folder of installation red5320

Make that folder:

mkdir /opt/red5320

cd /opt/red5320

...and download the OpenMeetings file:

wget http://apache.miloslavbrada.cz/openmeetings/3.2.0/bin/apache-openmeetings-3.2.0.zip

unzip apache-openmeetings-3.2.0.zip

...save the unloaded file to /opt:

mv apache-openmeetings-3.2.0.zip /opt

Download and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.39/mysql-connector-java-5.1.39.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.39.jar /opt/red5320/webapps/openmeetings/WEB-INF/lib

Now we are going to configure OpenMeetings for our database in MariaDB:

nano /opt/red5320/webapps/openmeetings/WEB-INF/classes/META-INF/mysql_persistence.xml

Modify in line 72:

, Url=jdbc:mysql://localhost:3306/openmeetings?

...to

, Url=jdbc:mysql://localhost:3306/open320?

... it is the name of the database that we did initially.

Modify in line 77:

```
, Username=root
```

...to

```
, Username=hola
```

... is the user that we did initially for the database.

Modify in line 78:

```
, Password=" />
```

...to

, Password=123456" />

...it is the password that we did initially for the user "hola" in the database.

Press on keyboard, Ctrl+x, Y and Enter, to save changes and exit nano editor.

Logically, if initially you choose another user name, password or database name, you will change them here.

Protect the access to the file:

(Only one line without space between both)

chmod 640 /opt/red5320/webapps/openmeetings/WEB-INF/classes/META-INF/mysql_persistence.xml

10)

----- Script to launch red5-OpenMeetings ------

Download the script to run red5-OpenMeetings:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-2

...copy it to where must be:

cp red5-2 /etc/init.d/

...concede execution permission:

chmod +x /etc/init.d/red5-2

If you would made the installation in any other different path to /opt/red5320, please edit the script

and modify the line:

```
RED5_HOME=/opt/red5320
```

...to

RED5_HOME=/your-path-installation

11)

----- Run red5-OpenMeetings -----

Restart MariaDB:

/etc/init.d/mysql restart

...and run red5-OpenMeetings. Please, open a new terminal as root, and be connected to Internet, so the running will be quick:

/etc/init.d/red5-2 start

...wait untill the text "clearSessionTable: 0", it is the last in the shell. Then, go with the browser to:

http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:

OpenMeetings
1. Enabling import of PDFs into whiteboard
 Install GhostScript on the server, you can get more information on http://pages.cs.wisc.edu/~ghost/ regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it). Install SWFTools on the server, you can get more information on http://www.swftools.org/ regarding installation. Some of the Linux distributions already have it in there package manager see http://www.swftools.org/ regarding installation. Some of the Linux distributions already have it in there package manager see http://www.swftools.org/ regarding installation. Some of the Linux distributions already have it in there package manager see http://www.swftools.org/ regarding installation. Some of the Linux distributions already have it in there package manager see http://packages.debian.org/unstable/utils/swftools), the recommended version of SWFTools is 0.9 as prior version have a bug that does lead to wrong object dimensions in the Whiteboard
If you have further questions or need support in installation or hosting:
Community-Support:
Mailing lists
Commercial-Support:
Commercial-Support
< > >> Finish

...push on [>] (bottom), and will show the default configuration with Derby, but we employ

MySQL (MariaDB):

OpenMeetings	
DB configuration	
Recommendation for production	l environment
By default OpenMeetings use using <u>MySQL</u> , <u>PostgreSql</u> , IBI	s the integrated <u>Apache Derby</u> database. For production environment you should consider M DB2, MSSQL or <u>Oracle</u>
Choose DB type	Apache Derby
Specify the name of the database	openmeetings
Specify DB user	user
Specify DB password	secret
	Check
	>> Finish

...so, scroll and Choose DB type to MySQL:

OpenMeetings		
DB configuration		
Recommendation for production	environment	
By default OpenMeetings uses using MySQL, PostgreSql, IBM	s the integrated <u>Apache Derby</u> database. <u>/ DB2, MSSQL</u> or <u>Oracle</u>	For production environment you should consider
Choose DB type	MySQL	
Specify DB host	localhost	
Specify DB port	3306	
Specify the name of the database	open 3 2 0	
Specify DB user	hola	
Specify DB password	123456	
		Check
		< > >> Finish

...will show the database configuration we made in the step 9.

If you've choose any other differents data, will show equally.

Please, press **>** button, and will go to:

OpenMeetings		
Userdata		
Username Userpass EMail		
User Time Zone	Europe/Madrid	
Group(Domains)		
Name		
		< > >> Finish

Now we must introduce the followings data, in order can continue the installation:

Username = a-namethis user will be administrator.
Userpass = a-password for the previous user.
Email = email-adress of this previous user.
User Time Zone = country where is this server.
Name = example-openmeetingsgroup name to choose.

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings.

A valid example to configure the mail server with Gmail, is as follows: (replace **john@gmail.com** with your real Gmail account)

Mail-Refer (system_email_addr)	==	john@gmail.com
SMTP-Server (smtp_server)		smtp.gmail.com
SMTP-Server Port (default Smtp-Server Port is 25) (smtp_port)		587
SMTP-Username (email_username)	==	john@gmail.com
SMTP-Userpass (email_userpass)	==	password of john@gmail.com
Enable TLS in Mail Server Auth	==	Yes

To select the language of your server OpenMeetings, please scroll on the line:

Default Language = english

...the rest we can leave as is. If necessary, can modify it as you like it:

OpenMeetings		
Configuration		
Configuration		
Allow self-registering (allow_frontend_register)	Yes 🗸	
Send Email to new registered Users (sendEmailAtRegister)	No	
New Users need to verify their EMail (sendEmailWithVerficationCode)	No	
Default Rooms of all types will be created	Yes 🗸	
Mail-Referer (system_email_addr)	noreply@openmeetings.apache.org	
SMTP-Server (smtp_server)	localhost	
SMTP-Server Port(default Smtp-Server Port is 25) (smtp_port)	25	
SMTP-Username (email_username)		
SMTP-Userpass (email_userpass)		
Enable TLS in Mail Server Auth	No 🗸	/
Set inviter's email address as ReplyTo in email invitations (inviter.email.as.replyto)	Yes 🗸	
Default Language	inglés 🗸 🗸	
Default Font for Export [default_export_font]	TimesNewRoman V	

Now press the button > and a new page will appear:

OpenMeetings		
Converters		
SWFTools Zoom 🔞	100	
SWFTools JPEG Quality 🛛 🔍	85	
SWFTools Path		Check
ImageMagick Path 🛛 🕚		Check
FFMPEG Path 🔞		Check
SoX Path		Check
OpenOffice/LibreOffice Path for jodconverter 🛛 🚳		Check
see also <u>Installation</u>		
		< >> Finish

>> Finish

<

>

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

	SWFTools Path	==	/usr/bin
	ImageMagick Path	==	/usr/bin
	FFMPEG Path	==	/usr/local/bin
	SOX Path	==	/usr/bin
OpenOffice/LibreC jodconverter	Office Path for		/usr/lib64/libreoffice

As you go introducing routes, you can check if they are correct, by pressing the button labeled **Check**. If it does not display any error message, that is OK.

Once completed the paths, please click the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

OpenMeetings	
Сгурt Туре	
Crypt Class	org.apache.openmeetings.util.crypt.SHA
You can use this default crypt type which is equal using: org.apache.openmeetings.utils.crypt MD see: <u>Custom Crypt Mechanism</u> You can edit this anymore	to PHP-MD5 function or BSD-Style encryption by 5CryptImplementation for more information or to write your own Crypt-Style value later BUT previous created Users and Sessions might be not usable
red5SIP Configuration	
Enable SIP	No 🗸
Enable red5SIP integration	
SIP rooms prefix	400
Prefix for phone number of conference rooms	
SIP extensions context	rooms
Context of Asterisk extensions	
	< > >> Finish

Now, touch the button Now:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Press Finish button...wait a seconds untill the tables are fill in our database.

When is concluded, this another page will appear. Don't clic on Enter the Application. First is need it to restart red5 server. Please, be connectd to Internet. Open a new terminal as root:

/etc/init.d/red5-2 restart

OpenMeetings
Enter the Application
Database was changed, please restart application to avoid possible issues
If your Red5-Server runs on a different Port or on a different domain alter the config values of the client
Mailing list
http://openmeetings.apache.org/mail-lists.html
There are some companies that also offer commercial support for Apache OpenMeetings:
http://openmeetings.apache.org/commercial-support.html
< > >> Finish

Now yes, you can clic on **Enter the Application**, or go with your browser to:

http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Login			
Username or mail address			
Password			
	🗖 Remember login		
Forgotten your password?	Network testing		
Not a member? Sign in			

Introduce the user's name and the password, that you have choosen during the installation, push **Sign in** button, and...

...Congratulations!

The next time that you like to accede OpenMeetings, would be:

http://localhost:5080/openmeetings

Remember to open in the server, the two following ports:

1935 5080

... in order that it could accede to OpenMeetings from other machines in Lan or Internet.

12)

----- OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

Administration \rightarrow Configuration

Home 👻	Rooms 🗸	Recordings 🗸	Administration 🗸		
▽ Welcome			•		
(?)	Hello firstname lastname				
	Timezone Europe/Madrid				
	Unread messag	ges <u>O</u>			
Upload new image	Edit your profile	1			
Help and support					

...and following the order of the red arrows:

50 🛨 🛤 🔜	1 2 🍽 🖬	Search	🚔 🕸 🕂 💥
≎ ID	≎ Key	≎ Value	Configuration
4	allow.oauth.register	1	Key switools path
5	default_group_id	1	
6	smtp_server	localhost	Value
7	smtp_port	25	Last update
8	system_email_addr	noreply@openmeetings.apache.or g	Updated by Comment Path To SWF-Tools
9	email_username		
10	email_userpass		
11	mail.smtp.starttls.ena ble	-	
12	mail.smtp.connection. timeout	30000	
13	mail.smtp.timeout	30000	
14	application.name	OpenMeetings	2 2
15	default_lang_id	1	5 2
16	swftools_zoom	100	
17	swftools_jpegquality	85	
18	swftools_path		I
19	imagemagick_path		
20	sox_path		
21	ffmpeg_path		
22	office.path		

And this is all.

If you have some doubt or question, please raise it in the Apache OpenMeetings forums:

http://openmeetings.apache.org/mail-lists.html

Thank you.

Alvaro Bustos
