

# Installation of Apache OpenMeetings 4.0.0 on Arch Linux

This tutorial is based on a fresh installations of

## arch-anywhere-2.2.8-x86\_64.iso

Arch Anywhere, it is a pure Arch Linux, with the only difference that the installation it is graphical. That's all.

It is tested with positive result. We will use the Apache's binary version OpenMeetings 4.0.0stable, that is to say will suppress his compilation. It is done step by step.

5-11-2017

Please, be connected to Internet during all the process tu run any server.

Starting...

1)

----- Update Operative System ------

Open a terminal as root:

su

...will ask for root password, and we update the operative system:

pacman -Syu

## 2)

# ----- Installation of Oracle Java 1.9 -----

Java 1.8 or 1.9 it is necessary for OpenMeetings 4.0.0. We'll install Oracle Java.

We'll install Packer. Packer is a wrapper for both Pacman and AUR. Packer reduce the complexity of manually compiling and installing the packages.

First, install the required dependencies:

## pacman -S base-devel fakeroot jshon expac git wget

when ask:	Enter a selection (default=all):	press Enter.
-----------	----------------------------------	--------------

...will ask also: Continue with the installation? [Y/n] ...press Enter.

...and when finish, exit as root:

#### exit

Download the PKGBUILD script from AUR:

wget https://aur.archlinux.org/cgit/aur.git/plain/PKGBUILD?h=packer

...rename the unloaded file:

```
mv PKGBUILD\?h\=packer PKGBUILD
```

...we compile it:

#### makepkg

...and now install Packer:

sudo pacman -U packer-\*.pkg.tar.xz

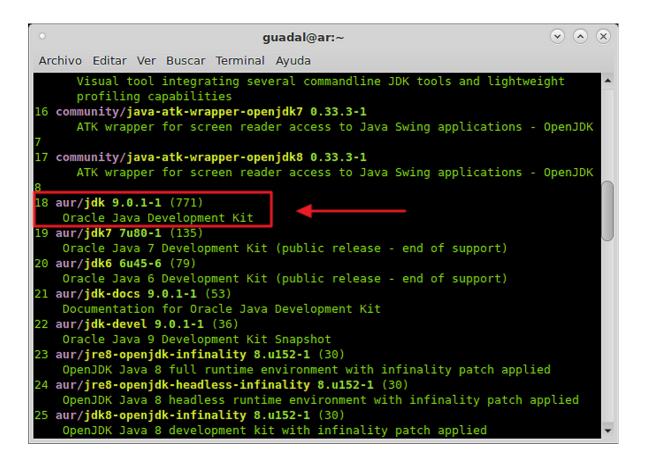

...will ask: Continue with the installation [Y/n] ...press Enter.

Now, being at home, and in the terminal as user, not as root, install Oracle Java:

#### packer jdk

...will show all the available java versions. Type the number of Oracle Java Development, according to your Arch Linux installation, 32 or 64bit.

In my case i type, at the end of the shell, the number 18:

 $\bigtriangledown$   $\land$   $\propto$ guadal@ar:~ Archivo Editar Ver Buscar Terminal Ayuda Eclipse (former IBM) OpenJ9 with openjdk9 47 aur/jdk8-j9-bin 8.0.5.0-1 (3) IBM® SDK, Java Technology Edition, Version 8 48 aur/jdk6-docs 6u30-1 (3) Documentation for Oracle Java 6 Development Kit 49 aur/jdk5 5u22-1 (3) Oracle Java 5 Development Kit (public release - end of support) 50 aur/bin32-jdk6 6u45-5 (3) Oracle Java 6 Development Kit (32-bit) (public release - end of support) 51 aur/ldapjdk 4.19-1 (2) The Mozilla LDAP Java SDK 52 aur/jdk8-docs 8u152-1 (2) Documentation for Oracle Java 8 Development Kit 53 aur/bin32-jdk5 5u22-1 (2) Oracle Java 5 Development Kit (32-bit) (public release - end of support) 54 aur/zulu-jdk 8u144b01-1 (1) Zulu JVM built upon OpenJDK 8 55 aur/jdk-dcevm 8u144-1 (1) Oracle Java Development Kit with DCEVM patches 56 aur/java8-openjdk-hsdis 8.u112-1 (1) Disassembler for HotSpot Type numbers to install. Separate each number with a space. Numbers: 18

Once you've typed your selected number, push Enter. And when ask:

Proceed with installation? [Y/n] y

Edit jdk PKGBUILD with \$EDITOR? [Y/n] n

Edit jdk.install with \$EDITOR? [Y/n] **n** 

... press Enter to the question that will do later.

3)

## ----- Installation of LibreOffice ------

OpenMeetings will need LibreOffice to convert to pdf the uploaded office files.

We install LibreOffice and Firefox (my Arch Linux installation have Mate desktop):

sudo pacman -S libreoffice firefox

... press Enter to any question.

# 4)

# ----- Installation of necessary packages and libraries -----

Will install packages and libraries that we'll need later:

(Only one line with space between both)

sudo pacman -S libjpeg ghostscript unzip gcc ncurses make zlib libtool bison bzip2 file-roller autoconf automake pkgconfig tomcat-native nmap curl freetype2 nano

5)

# ----- Installation ImageMagick and Sox -----

ImageMagick, will work with images files jpg, png, gif, etc. We install it:

sudo pacman -S imagemagick

Sox, work the sound. Install it:

sudo pacman -S sox

# 6) ------ Installation of Adobe Flash Player ------

OpenMeetings even need Adobe Flash Player for cam. We install it:

sudo pacman -S flashplugin

7)

# ----- Compilation of FFmpeg ------

FFmpeg work with video. Will install a libraries, paquets, and vlc to play the recordings that we'll make in OpenMeetings. Access as root to shell:

su ...will ask for root password

(Only one line with space between both)

pacman -S glibc faac faad2 gsm imlib2 vorbis-tools autoconf automake cmake gcc git libtool make mercurial nasm pkgconfig yasm vlc qt4

The ffmpeg compilation it is based on this url, updated file versions 5-11-2017:

https://trac.ffmpeg.org/wiki/CompilationGuide/Centos

I made a script that will download, compile and install ffmpeg. It is tested and works ok. The result of any recordings we do in OpenMeetings, will be in mp4 format.

When the compilation be finished, will appear a text announces it:

# FFMPEG Compilation is Finished!

So, download the script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-archlinux.sh

...concede execution permission to it:

chmod +x ffmpeg-archlinux.sh

...and run it (be connected to Internet):

# ./ffmpeg-archlinux.sh

The compilation will spend about 30 minutes.

When finished, please go to step 8).

But if you prefer, can copy and paste, though i **don't advise.** Leave here the commands script:

#### nano /opt/ffmpeg-arch.sh

...copy the green text from here:

# Script ffmpeg compile for Arch Linux# Alvaro Bustos, thanks to Hunter.# Updated 5-11-2017

# Create a temporary directory for sources. SOURCES=\$(mkdir ~/ffmpeg\_sources) cd ~/ffmpeg\_sources

# Download the necessary sources. # git clone --depth 1 git://git.videolan.org/x264 curl -#LO ftp://ftp.videolan.org/pub/x264/snapshots/last\_stable\_x264.tar.bz2 hg clone https://bitbucket.org/multicoreware/x265 git clone --depth 1 git://git.code.sf.net/p/opencore-amr/fdk-aac curl -L -O http://downloads.sourceforge.net/project/lame/lame/3.99/lame-3.99.5.tar.gz wget https://sources.voidlinux.eu/opus-1.2.1/opus-1.2.1.tar.gz wget http://downloads.xiph.org/releases/ogg/libogg-1.3.2.tar.gz wget http://downloads.xiph.org/releases/vorbis/libvorbis-1.3.5.tar.gz git clone --depth 1 https://chromium.googlesource.com/webm/libvpx.git # git clone --depth 1 git://source.ffmpeg.org/ffmpeg wget http://ffmpeg.org/releases/ffmpeg-3.1.1.tar.gz

# Unpack files
for file in `ls ~/ffmpeg\_sources/\*.tar.\*`; do
tar -xvf \$file
done

cd x264-\*/ ./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" --enable-static && make && make install && make distclean; cd ..

cd x265/build/linux cmake -G "Unix Makefiles" -DCMAKE\_INSTALL\_PREFIX="\$HOME/ffmpeg\_build" -DENABLE\_SHARED:bool=off ../../source && make && make install; cd ~/ffmpeg\_sources

## cd fdk-aac

autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && make install && make distclean; cd ..

# cd lame-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" --disable-shared --enablenasm && make && make install && make distclean; cd ..

# cd opus-\*/

autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && make install && make distclean; cd ..

## cd libogg-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && make install && make distclean; cd ..

## cd libvorbis-\*/

LDFLAGS="-L\$HOME/ffmeg\_build/lib" CPPFLAGS="-I\$HOME/ffmpeg\_build/include" ./configure --prefix="\$HOME/ffmpeg\_build" --with-ogg="\$HOME/ffmpeg\_build" --disable-shared && make && make install && make distclean; cd ..

## cd libtheora-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --with-ogg="\$HOME/ffmpeg\_build" --disableexamples --disable-shared --disable-sdltest --disable-vorbistest && make && make install; cd ...

#### cd libvpx

./configure --prefix="\$HOME/ffmpeg\_build" --disable-examples && make && make install && make clean; cd ..

#### cd ffmpeg-\*/

PKG\_CONFIG\_PATH="\$HOME/ffmpeg\_build/lib/pkgconfig" ./configure --prefix="\$HOME/ffmpeg\_build" --extra-cflags="-I\$HOME/ffmpeg\_build/include" --extraldflags="-L\$HOME/ffmpeg\_build/lib" --bindir="\$HOME/bin" --pkg-config-flags="--static" --enable-gpl --enable-nonfree --enable-libfdk\_aac --enable-libfreetype --enable-libmp3lame --enable-libopus --enable-libvorbis --enable-libvpx --enable-libx264 --enable-libx265 --enablelibtheora && make && make install && make distclean && hash -r; cd ..

cd ~/bin cp ffmpeg ffprobe ffserver lame x264 /usr/local/bin

## cd ~/ffmpeg\_build/bin cp x265 /usr/local/bin

echo "FFmpeg Compilation is Finished!"

...to here.

Concede permission of execution:

chmod +x /opt/ffpmeg-arch.sh

#### cd /opt

Now be connected to Internet, run the script and wait about 30 minutes while the compilation is finished:

#### ./ffmpeg-arch.sh

All the compiled files will be installed in: /usr/local/bin

8)

#### ----- Installation of MariaDB data server -----

MariaDB is the data server. We install it: (continue as root in shell)

pacman -S mariadb

Initialize data directories (be connected to Internet):

mysql\_install\_db --user=mysql --basedir=/usr --datadir=/var/lib/mysql

...and run MariaDB:

systemctl start mysqld

Give a password to MariaDB root . Please, modify new-password by your own and remember it: mysqladmin -u root password new-password

Access to MariaDB:

#### mysql -u root -p

...will ask for the password you does just now.

Make a database called open40, for OpenMeetings. User password must be of 8 digits minimum:

MariaDB [(none)]> CREATE DATABASE open40 DEFAULT CHARACTER SET 'utf8'; Now we create a user with all permission on this open40 database:

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open40.\* TO 'hola'@'localhost' IDENTIFIED BY '1a2B3c4D' WITH GRANT OPTION;

\* open40 ..... name of the database
\* hola ..... user for that database
\* 1a2B3c4D .....password of this user

You can change the data, but...remember it! Later we'll need it. We leave MariaDB:

MariaDB [(none)]> quit

9)

#### ----- Installation of OpenMeetings ------

We'll install OpenMeetings in /opt/red540. All the following information will be based on this directory.

Call to our folder of installation red540

Make that folder:

mkdir /opt/red540

cd /opt/red540

...and download the OpenMeetings file:

wget http://apache.miloslavbrada.cz/openmeetings/4.0.0/bin/apache-openmeetings-4.0.0.zip

unzip apache-openmeetings-4.0.0.zip

...save the unloaded file to /opt:

mv apache-openmeetings-4.0.0.zip /opt

Download and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.42/mysql-connector-java-5.1.42.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.42.jar /opt/red540/webapps/openmeetings/WEB-INF/lib

Now we are going to configure OpenMeetings for our database in MariaDB:

nano /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql\_persistence.xml

#### Modify in line 72:

, Url=jdbc:mysql://localhost:3306/openmeetings?

...to

, Url=jdbc:mysql://localhost:3306/open40?

... it is the name of the database that we did initially.

Press on keyboard, Ctrl+x, Y and Enter, to save changes and exit nano editor.

Logically, if initially you choose another database name, you will type it here.

Protect the access to the file:

(Only one line without space between both)

chmod 640 /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql\_persistence.xml

# 10)

----- Script to launch red5-OpenMeetings ------

We make the folder /etc/init.d, where put the red5 run script:

mkdir /etc/init.d

Download the script to run red5-OpenMeetings:

#### cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-2

...copy it to where must be:

cp red5-2 /etc/init.d/

...concede execution permission:

#### chmod +x /etc/init.d/red5-2

If you would made the installation in any other different path to /opt/red540, please edit the script

and modify the line:

RED5 HOME=/opt/red540

...to

 $RED5\_HOME=/your-path-installation$ 

11)

----- Run red5-OpenMeetings ------

Restart MariaDB:

systemctl restart mysqld

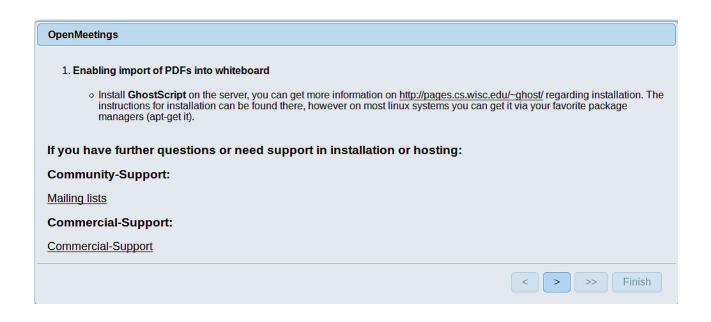

...and run red5-OpenMeetings. Please, open a new terminal as root, and be connected to Internet, so the running will be quick:

/etc/init.d/red5-2 start

...wait untill the text "CleanupJob.cleanRoomFiles", it is the last in the shell. Then, go with the browser to:

http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:

...push on [>] (bottom), and will show the default configuration with Derby, but we employ

# MySQL (MariaDB):

OpenMeetings
DB configuration
Recommendation for production environment
By default OpenMeetings uses the integrated <u>Apache Derby</u> database. For production environment you should consider using <u>MySQL</u> , <u>PostgreSql</u> , <u>IBM DB2</u> , <u>MSSQL</u> or <u>Oracle</u>
NOTE Please use unpredictable DB login and 'strong' password with length 8 characters or more.
Choose DB type Apache Derby
Specify the name of the database openmeetings Check
< > >> Finish

...so, scroll and Choose DB type to MySQL:

OpenMeetings		
DB configuration		
Recommendation for production	environment	
By default OpenMeetings use using <u>MySQL</u> , <u>PostgreSql, IB</u>	es the integrated <u>Apache Derby</u> database <u>M DB2, MSSQL</u> or <u>Oracle</u>	e. For production environment you should consider
NOTE Please use unpredictable	DB login and 'strong' password with leng	th 8 characters or more.
Choose DB type	MySQL	
Specify DB host	localhost	
Specify DB port	3306	
Specify the name of the database	open40	
Specify DB user		
Specify DB password		
		Check
		< > >> Finish

...and will show the database name, we made in the step 9.

If you've choose any other different name for this, will show equally.

Now we must introduce the user name we did for our data base, at the step 8, and his password:

Specify	DB	user	=	hol	a
---------	----	------	---	-----	---

## **Specify DB password** = 1a2B3c4D

Press **button**, and will go to:

OpenMeetings		
Userdata		
Username		
Userpass		
EMail		
User Time Zone	Europe/Madrid	
Group(Domains)		
Name		
		< > >> Finish

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: +(% # ! ... etc.)

Username	. =	a-namethis user will be administrator.
Userpass	=	a-password for the previous user.
Email	=	email-adress of this previous user.
User Time	e Zo	<b>ne</b> = country where is this server.
Name	=	example-openmeetingsgroup name to choose.

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

OpenN	leetings	
Conf	iguration	
	Allow self-registering Send Email to new registered Users New Users need to verify their EMail	
	Default DB objects of all types will be created (including Rooms, OAuth2 servers etc.)	
	Mail-Referer	noreply@openmeetings.apache.org
	SMTP-Server	localhost
	SMTP-Server Port(default Smtp-Server Port is 25)	25
	SMTP-Username	
	SMTP-Userpass	
	Enable TLS in Mail Server Auth	
	Set inviter's email address as ReplyTo in email invitations	
	Default Language	inglés 🗸
		< > >> Finish

A valid example to configure the mail server with Gmail, is as follows:

(replace john@gmail.com with your real Gmail account)

Mail-Refer	==	john@gmail.com	
SMTP-Server	==	smtp.gmail.com	
SMTP-Server Port (default Smtp-Server Port is 25) == 587			
SMTP-Username		john@gmail.com	
SMTP-Userpass	==	password of john@gmail.com	
Enable TLS in Mail Server Auth	==	turn green the button to activate	
Default Language		select your language	

...the rest you can change it as you like.

Now press the button > and a new page will appear:

Pag	14

OpenMeetings		
Converters		
Document conversion DPI 0	150	
Document conversion JPEG Quality 🚳	90	
ImageMagick Path		Check
FFMPEG Path 🔞		Check
SoX Path 🔞		Check
OpenOffice/LibreOffice Path for jodconverter 0		Check
see also <u>Installation</u>		
		< > >> Finish

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

ImageMagick Path	==	/usr/bin
FFMPEG Path		/usr/local/bin
SOX Path	==	/usr/bin
OpenOffice/LibreOffice Path for jodconverter		/usr/lib/libreoffice

Once completed the paths, please click the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

OpenMeetings		
Crypt Type		
Crypt Class 📵	org.apache.openmeetings.util.crypt.SCr	
red5SIP Configuration		
Enable SIP 🕚		
SIP rooms prefix 0	400	
SIP extensions context 0	rooms	
		< > >> Finish

Now, touch the button Now this window:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Press Finish button...wait a seconds untill the tables are fill in our database.

When is concluded, this another page will appear. Don't clic on Enter the Application. First is need it to restart red5 server. Please, be connectd to Internet. Open a new terminal as root:

# /etc/init.d/red5-2 restart

OpenMeetings	
Enter the Application	
Database was changed, please restart application to avoid possible issues	
If your Red5-Server runs on a different Port or on a different domain alter the config values of the client	
Mailing list	
http://openmeetings.apache.org/mail-lists.html	
There are some companies that also offer commercial support for Apache OpenMeetings:	
http://openmeetings.apache.org/commercial-support.html	
< > >> Finish	

Now yes, you can clic on **Enter the Application**, or go with your browser to:

#### http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Login		
Username or mail address		
Password		
	🗖 Remember login	
Forgotten your password?	Network testing	
Not a member? Sign in		

Introduce the user's name and the password, that you have choosen during the installation, push **Sign in** button, and...

# ...Congratulations!

The next time that you like to accede OpenMeetings, would be:

http://localhost:5080/openmeetings

Remember to open in the server, the two following ports:

1935 5080

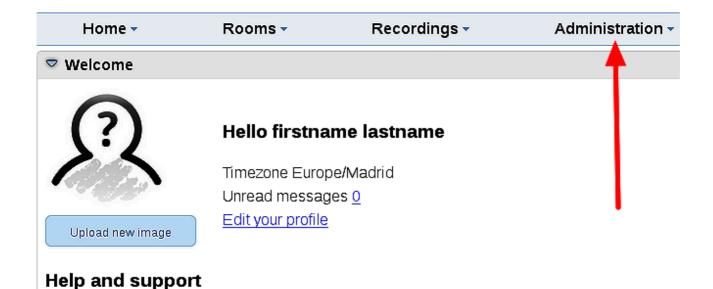

... in order that it could accede to OpenMeetings from other machines in Lan or Internet.

12)

#### ----- OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

#### Administration $\rightarrow$ Configuration

...and following the order of the red arrows:

Home -Rooms -Recordings -Administration -50 I I ≪ 12 ► ► 🗎 💈 🕂 💥 Search ) ◊ Value ≎ ID Key Configuration org.apache.openmeetings.util.crypt.S Type string 1 crypt.class.name Ŧ CryptImplementation Key path.ffmpeg 2 allow.frontend.register true Value 3 allow.soap.register true 4 allow.oauth.register true Last update Oct 17, 2017 5:54:57 PM 5 default.group.id 1 Updated by toro 6 mail.smtp.server localhost Comment Path To FFMPEG 7 mail.smtp.port 25 8 mail.smtp.system.email noreply@openmeetings.apache.org 9 mail.smtp.user 10 mail.smtp.pass mail.smtp.starttls.enabl 11 false е mail.smtp.connection.ti 30000 12 meout 13 30000 mail.smtp.timeout 14 application.name OpenMeetings 15 default.lang.id 8 16 document.dpi 150 17 document.quality 90 18 path.imagemagick 19 path.sox path.ffmpeg 2 20 1 21 path.office http://mail-archives.apache.org dashboard.rss.feed1 /mod\_mbox/openmeetings-22 user/?format=atom http://mail-archives.apache.org dashboard.rss.feed2 23 /mod\_mbox/openmeetingsdev/?format=atom send.email.at.register 24 false send.email.with.verficat false 25 ion

Cha

And this is all.

If you have some doubt or question, please raise it in the Apache OpenMeetings forums:

http://openmeetings.apache.org/mail-lists.html

\_\_\_\_\_

Thank you.

Alvaro Bustos
