

# Installation of Apache OpenMeetings 4.0.0 on Debian 8

This tutorial is made based on fresh installations of

# debian-8.6.0-amd64-CD-1.iso

It is tested with positive result. We will use the Apache's binary version OpenMeetings 4.0.0 stable, that is to say will suppress his compilation. It is done step by step.

5-11-2017

Starting...

1)

First update and upgrade the OS:

apt-get update

apt-get upgrade

2)

# ----- Installation of Oracle Java 1.8 -----

OpenMeetings 4.0.0 need Java 1.8 to work. Add repository to install Oracle Java 1.8.

(Only one line with space between both)

echo "deb http://ppa.launchpad.net/webupd8team/java/ubuntu trusty main" | tee /etc/apt/sources.list.d/webupd8team-java.list

echo "deb-src http://ppa.launchpad.net/webupd8team/java/ubuntu trusty main" | tee -a /etc/apt/sources.list.d/webupd8team-java.list

apt-key adv --keyserver hkp://keyserver.ubuntu.com:80 --recv-keys EEA14886

# apt-get update

To accept the license automatically when install it:

(Only one line without space between both)

 $echo\ oracle-java 8-installer\ shared/accepted-oracle-license-v1-1\ select\ true\ |\ sudo\ /usr/bin/debconf-set-selections$ 

...now install Oracle Java:

apt-get install oracle-java8-installer

Maybe you have installed various versions of Java. We select the just installed Oracle Java:

update-alternatives --config java

To know the active java version:

java -version

3)

----- Installation of LibreOffice ------

LibreOffice is need it to convert to pdf the uploaded files.

apt-get install libreoffice

4)

# -----Installation ImageMagick y Sox ------

ImageMagic, work the image files jpg, png, gif, etc. Will install it and some paquets and libraries:

apt-get install imagemagick libgif4 libgif-dev zlib1g-dev liboil0.3 unzip make

apt-get install build-essential libfreetype6-dev wget

Sox, work the audio. Will compile.

cd /opt

wget http://sourceforge.net/projects/sox/files/sox/14.4.2/sox-14.4.2.tar.gz

tar xzvf sox-14.4.2.tar.gz

cd /opt/sox-14.4.2

./configure

make && make install

cd /opt

5)

# ----- Installation of Adobe Flash Player -----

OpenMeetings even need Adobe Flash Player for cam. Add repository to can install it:

gedit /etc/apt/sources.list

...copy-paste these two lines and comment: # deb cdrom:[Debian GNU/Linux 8 \_Jessie\_ ...

deb http://ftp.us.debian.org/debian jessie contrib non-free deb http://ftp.us.debian.org/debian jessie contrib

...save, update:

apt-get update

...and install:

apt-get install flashplugin-nonfree

6)

----- Compilation of FFmpeg ------

FFmpeg will work the video.

This compilation is based on:

https://trac.ffmpeg.org/wiki/CompilationGuide/Ubuntu

Updated to 5-11-2017. Install libraries:

(Only one line with space between each one)

apt-get -y --force-yes install autoconf automake libass-dev libfreetype6-dev libgpac-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0-dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev nasm libx264-dev cmake mercurial libopus-dev curl git

I made a script that will download, compile and install ffmpeg. It is tested and works rightly. The result of any recording we do in OpenMeetings, will be in mp4 format.

Please, download the script.

cd /opt

(Only one line without space between both)

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-ubuntu-debian.sh

...concede permission of execution:

chmod +x ffmpeg-ubuntu-debian.sh

...and run it (be connected to Internet). The compilation will spend about 30 minutes:

./ffmpeg-ubuntu-debian.sh

When finish the compilation, a text will appear:

#### FFmpeg Compilation is Finished!

Then, please, go to step 7).

But if you prefer copy and paste (i don't advise), here leave the commands script:

sudo gedit /opt/ffmpeg.sh

...copy and past from here:

# FFmpeg compilation for Ubuntu and Debian.# Alvaro Bustos. Thanks to Hunter.# Updated 5-11-2017

sudo apt-get update sudo apt-get -y --force-yes install autoconf automake build-essential libass-dev libfreetype6-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev mercurial cmake

# Create a directory for sources. SOURCES=\$(mkdir ~/ffmpeg\_sources) cd ~/ffmpeg\_sources

# Download the necessary sources. wget ftp://ftp.gnome.org/mirror/xbmc.org/build-deps/sources/lame-3.99.5.tar.gz wget http://www.tortall.net/projects/yasm/releases/yasm-1.3.0.tar.gz curl -#LO ftp://ftp.videolan.org/pub/x264/snapshots/last\_stable\_x264.tar.bz2 hg clone https://bitbucket.org/multicoreware/x265 wget -O fdk-aac.tar.gz https://github.com/mstorsjo/fdk-aac/tarball/master wget https://sources.voidlinux.eu/opus-1.2.1/opus-1.2.1.tar.gz git clone --depth 1 https://chromium.googlesource.com/webm/libvpx.git # git clone --depth 1 git://source.ffmpeg.org/ffmpeg wget http://ffmpeg.org/releases/ffmpeg-3.1.1.tar.gz

# Unpack files
for file in `ls ~/ffmpeg\_sources/\*.tar.\*`; do
tar -xvf \$file
done

cd yasm-\*/ ./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" && make && sudo make install && make distclean; cd ..

cd x264-\*/ PATH="\$HOME/bin:\$PATH" ./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" --enable-static && PATH="\$HOME/bin:\$PATH" make && sudo make install && make distclean; cd ..

cd x265/build/linux PATH="\$HOME/bin:\$PATH" cmake -G "Unix Makefiles" -DCMAKE\_INSTALL\_PREFIX="\$HOME/ffmpeg\_build" -DENABLE\_SHARED:bool=off ../../source && make && sudo make install && make distclean; cd ~/ffmpeg\_sources

cd mstorsjo-fdk-aac\*/ autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && sudo make install && make distclean; cd ..

#### cd lame-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --enable-nasm --disable-shared && make && sudo make install && make distclean; cd ..

#### cd opus-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && sudo make install && make distclean; cd ..

#### cd libvpx

PATH="\$HOME/bin:\$PATH" ./configure --prefix="\$HOME/ffmpeg\_build" --disable-examples --disable-unit-tests && PATH="\$HOME/bin:\$PATH" make && sudo make install && make clean; cd ..

#### cd ffmpeg-\*/

PATH="\$HOME/bin:\$PATH" PKG\_CONFIG\_PATH="\$HOME/ffmpeg\_build/lib/pkgconfig" ./configure --prefix="\$HOME/ffmpeg\_build" --pkg-config-flags="--static" --extra-cflags="-I\$HOME/ffmpeg\_build/include" --extra-ldflags="-L\$HOME/ffmpeg\_build/lib" --bindir="\$HOME/bin" --enable-gpl --enable-libass --enable-libfdk-aac --enable-libfreetype --enable-libmp3lame --enable-libopus --enable-libtheora --enable-libvorbis --enable-libvpx --enable-libx264 --enable-libx265 --enable-nonfree && PATH="\$HOME/bin:\$PATH" make && sudo make install && make distclean && hash -r; cd ..

#### $cd \sim /bin$

cp ffmpeg ffprobe ffplay ffserver vsyasm x264 yasm ytasm /usr/local/bin

cd ~/ffmpeg\_build/bin cp lame x265 /usr/local/bin

echo "FFmpeg Compilation is Finished!"

...to here.

Concede permission of execution:

chmod +x /opt/ffmpeg.sh

Now be connected to Internet, run the script and wait some long minutes while the compilation:

cd /opt

### ./ffmpeg.sh

All the compiled files will be installed in: /usr/local/bin

#### 7)

----- Installation and configuration of MariaDB data server -----

MariaDB is the data server.

It is in Jessie repository. Install these packages:

sudo apt-get install python-software-properties software-properties-common

...and now MariaDB:

apt-get install mariadb-server

Will open a window asking for a root MariaDB password:

Type the password you like it  $\rightarrow \mathbf{Ok} \rightarrow \mathbf{Enter}$ 

...will ask repeat the password:

File Edit View Search Terminal Help	
Package configuration	
Configuring Repeat password fo	mariadb-server-10.0
	<0k>

Run MariaDB:

Make a database for OpenMeetings. User password must be of 8 digits minimum:

#### mysql -u root -p

...will ask for the root password that we have just choosen, type it...

MariaDB [(none)]> CREATE DATABASE open40 DEFAULT CHARACTER SET 'utf8';

With this command we has created a database called open40. Now we create a user with all permission on this database.

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open40.\* TO 'hola'@'localhost' IDENTIFIED BY '1a2B3c4D' WITH GRANT OPTION;

- \* open40 .....is the database name.
- \* hola .....is the user name for this database.
- \* 1a2B3c4D ... is the password of this user.

You can change the data...but remember it! Later we'll need it.

Now we leave MariaDB:

MariaDB [(none)]> quit

8)

#### ----- Installation of OpenMeetings ------

We'll install OpenMeetings in /opt/red540. All the following information will be based on this directory.

Call to our folder of installation red540

Make the folder:

mkdir /opt/red540

cd /opt/red540

wget http://apache.miloslavbrada.cz/openmeetings/4.0.0/bin/apache-openmeetings-4.0.0.zip unzip apache-openmeetings-4.0.0.zip ....save the unloaded file to /opt: mv apache-openmeetings-4.0.0.zip /opt

Do to **nobody** owner of the whole OpenMeetings folder installation, for security: chown -R nobody /opt/red540

Download and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.42/mysql-connector-java-5.1.42.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.42.jar /opt/red540/webapps/openmeetings/WEB-INF/lib

Now we are going to form OpenMeetings for our database in MariaDB:

gedit /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql\_persistence.xml

#### Modify on line 72:

, Url=jdbc:mysql://localhost:3306/openmeetings?

...to

, Url=jdbc:mysql://localhost:3306/open40?

...it is the name of the database that we did initially.

If you choose another name for the database, please type it here. Save the changes.

We protect the access to the file:

(Only one line without space between both)

 $chmod\ 640\ /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql_persistence.xml$ 

9)

# ----- Script to launch red5-OpenMeetings ------

Please, download the red5 run script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-ubdeb2

...and copy it to:

cp red5-ubdeb2 /etc/init.d/

Concede permission of execution:

chmod +x /etc/init.d/red5-ubdeb2

If you made the installation in any other different path to /opt/red540, please edit the script and modify the line:

RED5 HOME=/opt/red540

...to

RED5\_HOME=/your-path-installation

10)

# ----- Run red5-OpenMeetings ------

Start MariaDB if still it is not:

/etc/init.d/mysql start

...and now start red5-OpenMeetings:

/etc/init.d/red5-ubdeb2 start

...will appear two text lines in the shell:

start-stop-daemon: --start needs --exec or --startas

Try 'start-stop-daemon --help' for more information.

...you do nothing. Don't worry, everything work right.

Wait about 40 seconds minimum, in order that red5 it is runing completely, and later can go to:

# http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:

OpenMeetings
<ul> <li>1. Enabling import of PDFs into whiteboard         <ul> <li>Install GhostScript on the server, you can get more information on <a href="http://pages.cs.wisc.edu/~ghost/">http://pages.cs.wisc.edu/~ghost/</a> regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it).</li> </ul> </li> </ul>
If you have further questions or need support in installation or hosting:
Community-Support:
Mailing lists
Commercial-Support:
Commercial-Support
< > >> Finish

Push button (bottom), and will show the default database configuration with Derby, but

we employ MySQL (MariaDB):

OpenMeetings
DB configuration
Recommendation for production environment
By default OpenMeetings uses the integrated <u>Apache Derby</u> database. For production environment you should consider using <u>MySQL, PostgreSql, IBM DB2, MSSQL</u> or <u>Oracle</u>
NOTE Please use unpredictable DB login and 'strong' password with length 8 characters or more.
Choose DB type Apache Derby
Check
< > Finish

...then, scroll and Choose DB type to MySQL:

# Pag 11

OpenMeetings	
DB configuration	
Recommendation for production environment	
By default OpenMeetings uses the integrated <u>Apache Derby</u> datab using <u>MySQL</u> , <u>PostgreSql</u> , <u>IBM DB2</u> , <u>MSSQL</u> or <u>Oracle</u>	ase. For production environment you should consider
NOTE Please use unpredictable DB login and 'strong' password with I	ength 8 characters or more.
Choose DB type MySQL	
Specify DB host localhost	
Specify DB port 3306	
Specify the name of the database open40	
Specify DB user	
Specify DB password	
	Check
	< > >> Finish

...and will show our data base configuration we made in step 8.

If you've choose any other different name for this, will show equally. Now we must introduce the user name we did for our data base, at the step 8, and his password:

Specify DB user	=	hola
Specify DB password	=	1a2B3c4D

Please, push **button**, and will go to:

OpenMeetings		
Userdata		
Username		
Userpass		
EMail		
User Time Zone	Europe/Madrid	
Group(Domains)		
Name		
Name		
		< > >> Finish

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: +(% # ! ... etc.)

Username	=	a-namethis user will be administrator.
Userpass	=	a-password for the previous user.
Email	=	email-adress of the previous user.
User Time	Zon	$\mathbf{e}$ = country where is this serve
Name	=	example-openmeetingsgroup name to choose.

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

OpenMeetings	
Configuration	
Allow self-registering Send Email to new registered Users	
New Users need to verify their EMail Default DB objects of all types will be created (including Rooms, OAuth2 servers etc.)	
Mail-Referer	noreply@openmeetings.apache.org
SMTP-Server	localhost
SMTP-Server Port(default Smtp-Server Port is 25)	25
SMTP-Username	
SMTP-Userpass	
Enable TLS in Mail Server Auth	
Set inviter's email address as ReplyTo in email invitations	
Default Language	inglés 🗸
	< > >> Finish

A valid example to configure the mail server with Gmail, is as follows: (replace **john@gmail.com** with your real Gmail account)

Mail-Refer		john@gmail.com	
SMTP-Server	==	smtp.gmail.com	
SMTP-Server Port (default Smtp-Server Port is 25)		587	
SMTP-Username		john@gmail.com	
SMTP-Userpass	==	password of john@gmail.com	
Enable TLS in Mail Server Auth ==turn green the button to activat			
To select the language of your server OpenMeetings, please scroll on the line:			
Default Language	==	select your language	

...the rest you can modify it as you like.

Now press the button  $\geq$  and a new page will appear:

OpenMeetings		
Converters		
Document conversion DPI (1)	[150	
Document conversion JPEG Quality 0	90	
ImageMagick Path 🔞		Check
FFMPEG Path 🕚		Check
SoX Path 🔞		Check
OpenOffice/LibreOffice Path for jodconverter		Check
see also Installation		
		< > >> Finish

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

ImageMagick Path	==	/usr/bin
FFMPEG Path		/usr/local/bin
SOX Path	==	/usr/local/bin
OpenOffice/LibreOffice Path for jodconverter		== /usr/lib/libreoffice (32 - 64bits)

As you go introducing paths, you can check if they are correct by pressing the button labeled **Check**. If it does not display any error message, that is OK.

Once completed the paths, please click the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

OpenMeetings		
Crypt Type		
Crypt Class 📵	org.apache.openmeetings.util.crypt.SCr	
red5SIP Configuration		
Enable SIP 🔞		
SIP rooms prefix 0	400	
SIP extensions context	rooms	
		< > >> Finish

Now push the button  $\geq$  Will show this window:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Push Finish button ...wait a seconds untill the tables are fill in the database.

When has concluded, this another page will appear. Don't clic on <u>Enter the Application</u>. First is need it to restart the server:

## /etc/init.d/red5-ubdeb2 restart

Now yes, you can clic on **Enter the Application**, or go with your browser to:

http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Login		
Username or mail address		
Password		
	Remember login	
Forgotten your password?	Network testing	
Not a member? Sign in		

Introduce the user's name and the password that you have chosen during the installation, push the **Sign in** button and...

# ...Congratulations!

The next time that you like to accede to OpenMeetings will be:

http://localhost:5080/openmeetings

Remember to open in the server, the two following ports:

# 1935 5080

... in order that it could accede to OpenMeetings from other machines in Lan or from Internet.

# 11)

----- OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

# $Administration \rightarrow Configuration$

Home 🗸	Rooms 🗸	Recordings 🗸	Administration -
