Installation of Apache OpenMeetings 4.0.0 on Ubuntu 14.04 LTS

This tutorial is made based on fresh installations of

ubuntu-14.04.2-desktop-amd64.iso

It is tested with positive result. We will use the Apache's binary version OpenMeetings 4.0.0 stable, that is to say will suppress his compilation. It is done step by step.

5-11-2017

Starting...

1)

First update and upgrade the OS:

sudo apt-get update

sudo apt-get upgrade

2)

------ **Installation of Oracle Java 1.8** ------

OpenMeetings **4.0.0** need Java **1.8** to work. We´ll install Oracle Java, because Icedtea-plugin give error with OpenJava when try recording or share desktop :

sudo add-apt-repository ppa:webupd8team/java

sudo apt-get update

sudo apt-get install oracle-java8-installer

Will open a window. Press **Enter**.

```
root@tub: /home/guadal
File  Edit  View  Search  Terminal  Help
Package configuration

            ┤ Configuring oracle-java8-installer ├

  Oracle Binary Code License Agreement for the Java SE Platform Products
  and JavaFX

  You MUST agree to the license available in http://java.com/license if
  you want to use Oracle JDK.

                              <Ok>

```
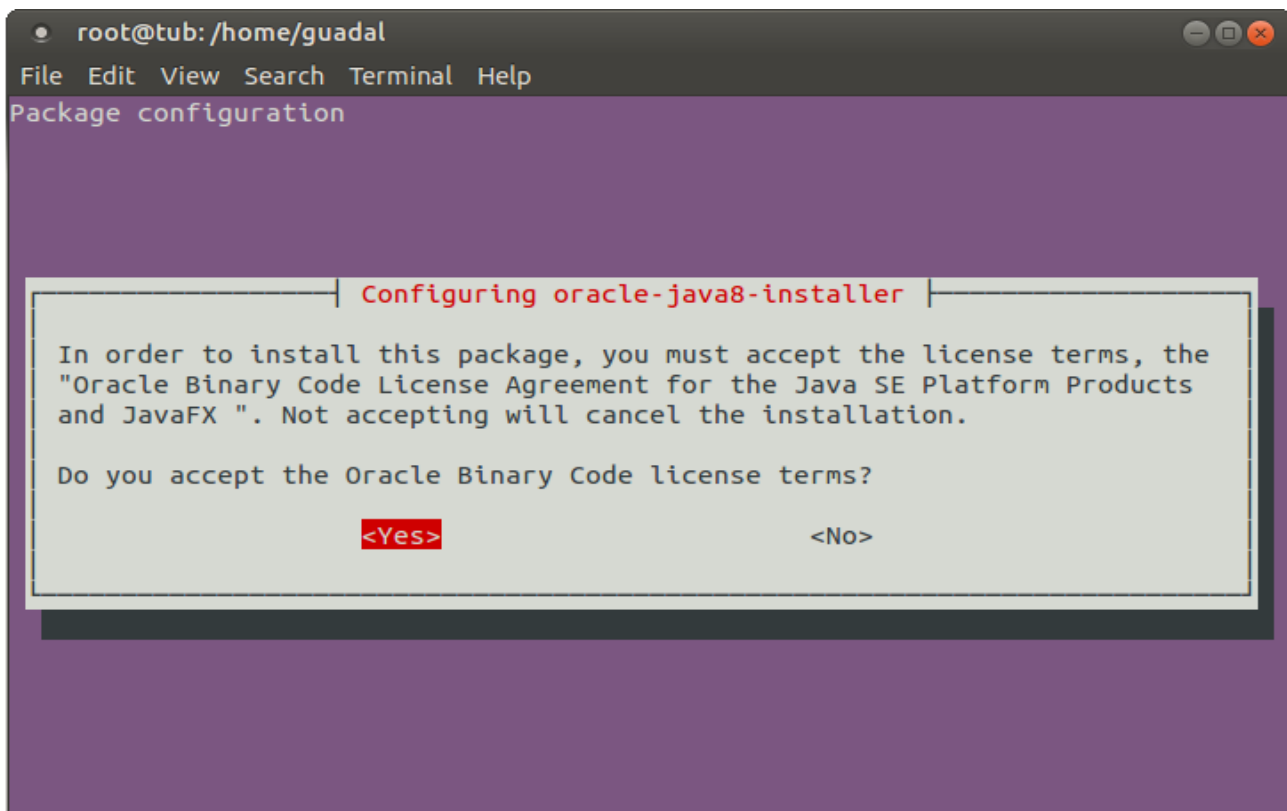

Will ask newly. Answer: **Yes → Enter**

```
root@tub: /home/guadal
File  Edit  View  Search  Terminal  Help
Package configuration

            ┤ Configuring oracle-java8-installer ├

  In order to install this package, you must accept the license terms, the
  "Oracle Binary Code License Agreement for the Java SE Platform Products
  and JavaFX ". Not accepting will cancel the installation.

  Do you accept the Oracle Binary Code license terms?
              <Yes>                              <No>

```

If you have more than one java version installed, please choose Oracle Java 1.8:

sudo update-alternatives --config java

You can see the active java version:

java -version

To configure automaticaly the Java 8 Environment:

sudo apt-get install oracle-java8-set-default

3)
------ Installation of LibreOffice ------

LibreOffice is need it to convert to pdf the uploaded files.

The ubuntu desktop iso have already LibreOffice installed, so don´t need install it.

This is only for server ubuntu iso:

sudo add-apt-repository ppa:libreoffice/ppa

sudo apt-get update

sudo apt-get install libreoffice

Now some kind of information only:

LibreOffice installation folder is /usr/lib/libreoffice.

4)
------ Installation ImageMagick and Sox ------

ImageMagick, work the image files, jpg, png, gif, etc. Install it and some paquet and libraries.

(Only one line without space between both)

sudo apt-get install -y imagemagick libgif4 libjpeg62 zlib1g-dev liboil0.3 unzip make build-essential wget

Sox, work the sound. Will compile.

cd /opt

wget http://sourceforge.net/projects/sox/files/sox/14.4.2/sox-14.4.2.tar.gz

tar xzvf sox-14.4.2.tar.gz

cd /opt/sox-14.4.2

./configure

make && make install

5)

------ Installation of Adobe Flash Player ------

OpenMeetings even need Adobe Flash Player for cam and audio. Install it:

sudo apt-get install flashplugin-installer

6)

------ Compilation of FFmpeg ------

FFmpeg will work with video.

This compilation is based on:

https://trac.ffmpeg.org/wiki/CompilationGuide/Ubuntu

Updated to 5-11-2017. Install libraries.

(Only one line with space between each one)

sudo apt-get -y --force-yes install autoconf automake build-essential libass-dev libfreetype6-dev libgpac-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0-dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev nasm libx264-dev cmake mercurial libopus-dev curl git nmap

I made a script that it will download, compile and install ffmpeg. The result of any recording we do in OpenMeetings, will be in mp4 format.

Please, download the script.

cd /opt

(Only one line without space between both)

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-ubuntu-debian.sh

...concede permission of execution:

chmod +x ffmpeg-ubuntu-debian.sh

...and run it (be connected to Internet). The compilation will spend about 30 minutes:

./ffmpeg-ubuntu-debian.sh

When finish the compilation, a text will announce it:

<div align="center">FFmpeg Compilation is Finished!</div>

Then, please, go to **step 7).**

But if you prefer copy and paste (i **don´t advise**), here leave the commands script:

sudo gedit /opt/ffmpeg.sh

...copy and paste **from here**:

# FFmpeg compilation for Ubuntu and Debian.
# Alvaro Bustos. Thanks to Hunter.
sudo apt-get update

sudo apt-get -y --force-yes install autoconf automake build-essential libass-dev libfreetype6-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0-dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev mercurial cmake

# Create a directory for sources.
SOURCES=$(mkdir ~/ffmpeg_sources)
cd ~/ffmpeg_sources

Download the necessary sources.
wget ftp://ftp.gnome.org/mirror/xbmc.org/build-deps/sources/lame-3.99.5.tar.gz
wget http://www.tortall.net/projects/yasm/releases/yasm-1.3.0.tar.gz
curl -#LO ftp://ftp.videolan.org/pub/x264/snapshots/last_stable_x264.tar.bz2
hg clone https://bitbucket.org/multicoreware/x265
wget -O fdk-aac.tar.gz https://github.com/mstorsjo/fdk-aac/tarball/master
wget https://sources.voidlinux.eu/opus-1.2.1/opus-1.2.1.tar.gz
git clone --depth 1 https://chromium.googlesource.com/webm/libvpx.git
git clone --depth 1 git://source.ffmpeg.org/ffmpeg
wget http://ffmpeg.org/releases/ffmpeg-3.1.1.tar.gz
# Unpack files
for file in `ls ~/ffmpeg_sources/*.tar.*`; do
tar -xvf $file
done

```
cd yasm-*/
./configure --prefix="$HOME/ffmpeg_build" --bindir="$HOME/bin" && make && sudo make
install && make distclean; cd ..

cd x264-*/
PATH="$HOME/bin:$PATH" ./configure --prefix="$HOME/ffmpeg_build" --bindir="$HOME/bin"
--enable-static && PATH="$HOME/bin:$PATH" make && sudo make install && make distclean;
cd ..

cd x265/build/linux
PATH="$HOME/bin:$PATH" cmake -G "Unix Makefiles"
-DCMAKE_INSTALL_PREFIX="$HOME/ffmpeg_build" -DENABLE_SHARED:bool=off
../../source && make && sudo make install && make distclean; cd ~/ffmpeg_sources

cd mstorsjo-fdk-aac*
autoreconf -fiv && ./configure --prefix="$HOME/ffmpeg_build" --disable-shared && make &&
sudo make install && make distclean; cd ..

cd lame-*/   ./configure --prefix="$HOME/ffmpeg_build" --enable-nasm --disable-shared && make
&& sudo make install && make distclean; cd ..

cd opus-*/
./configure --prefix="$HOME/ffmpeg_build" --disable-shared && make && sudo make install &&
make distclean; cd ..

cd libvpx
PATH="$HOME/bin:$PATH" ./configure --prefix="$HOME/ffmpeg_build" --disable-examples
--disable-unit-tests && PATH="$HOME/bin:$PATH" make && sudo make install && make clean;

cd ..

cd ffmpeg-*/
PATH="$HOME/bin:$PATH" PKG_CONFIG_PATH="$HOME/ffmpeg_build/lib/pkgconfig"
./configure --prefix="$HOME/ffmpeg_build" --pkg-config-flags="--static" --extra-cflags="-
I$HOME/ffmpeg_build/include"  --extra-ldflags="-L$HOME/ffmpeg_build/lib"
--bindir="$HOME/bin" --enable-gpl --enable-libass --enable-libfdk-aac --enable-libfreetype
--enable-libmp3lame --enable-libopus --enable-libtheora --enable-libvorbis --enable-libvpx
--enable-libx264 --enable-libx265 --enable-nonfree && PATH="$HOME/bin:$PATH" make &&
sudo make install && make distclean && hash -r; cd ..

cd ~/bin
cp ffmpeg ffprobe ffplay ffserver vsyasm x264 yasm ytasm /usr/local/bin

cd ~/ffmpeg_build/bin
cp lame x265 /usr/local/bin

echo "FFmpeg Compilation is Finished!"
```

...to here.

Concede permission of execution:

chmod +x /opt/ffpmeg.sh

Now be connected to Internet, run the script and wait some long minutes while the compilation:

cd /opt

./ffmpeg.sh

All the compiled files are installed on: /usr/local/bin

7)

------ **Installation and configuration of MariaDB data server** ------

**MariaDB** is the data server. Will install it.

First install these paquets:

sudo apt-get install python-software-properties software-properties-common

...and now MariaDB:

sudo apt-get install mariadb-server

Will open a window asking for a root MariaDB password.

```
root@tub: /home/guadal                                      ___ ▢ ⊗
File  Edit  View  Search  Terminal  Help
Package configuration

   ┌─────────────────┤ Configuring mariadb-server-5.5 ├──────────────────┐
   │ While not mandatory, it is highly recommended that you set a password │
   │ for the MariaDB administrative "root" user.                          │
   │                                                                      │
   │ If this field is left blank, the password will not be changed.       │
   │                                                                      │
   │ New password for the MariaDB "root" user:                            │
   │                                                                      │
   │ ▌                                                                    │
   │                                                                      │
   │                              <Ok>                                    │
   │                                                                      │
   └──────────────────────────────────────────────────────────────────────┘

```

Type one password → **OK** → **Enter**

Will ask repeat the password:
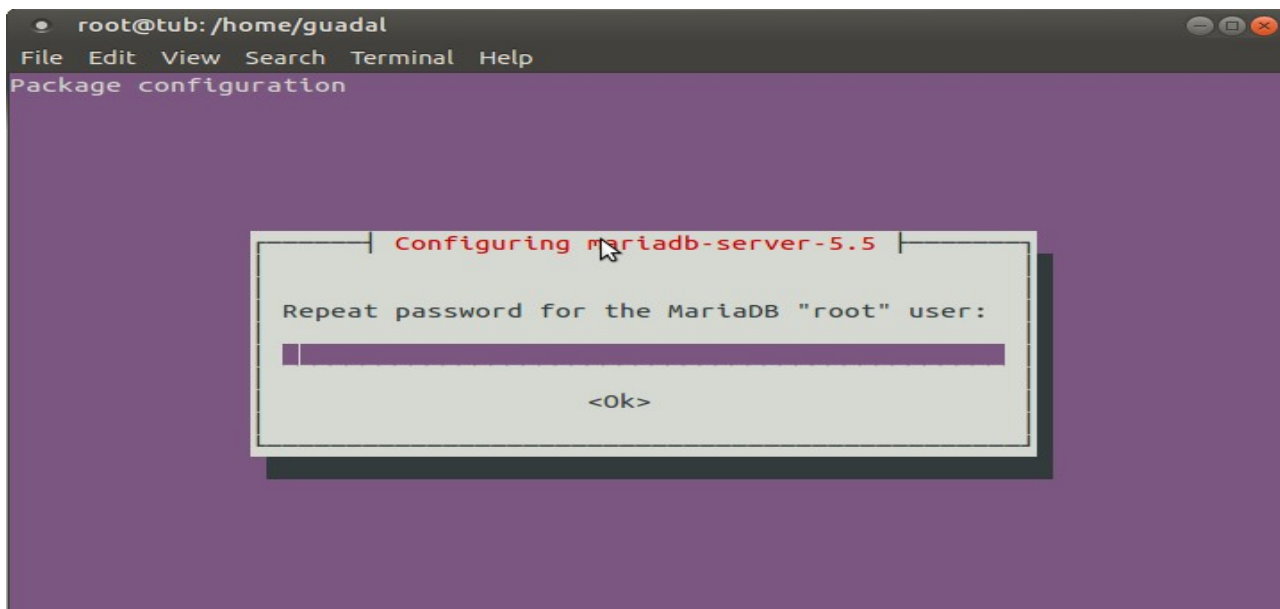

Run MariaDB:

/etc/init.d/mysql start

Make a database with his own user for OpenMeetings:

mysql -u root -p

...will ask for the root password that we have just chosen, type it...

MariaDB [(none)]> CREATE DATABASE open40 DEFAULT CHARACTER SET 'utf8';

With this command we has created a database called open40.
Now we create a user on this database. User password must be of 8 digits minimum:

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open40.* TO 'hola'@'localhost' IDENTIFIED
BY '1a2B3c4D' WITH GRANT OPTION;

* open40 .....is the database name.
* hola ………is the user name for the database.
* 1a2B3c4D ..is the password of that user

You can change the data...but remember it! Later well need it.

Now, we leave MariaDB:

MariaDB [(none)]> quit

8)

------ Installation of OpenMeetings ------

We´ll install OpenMeetings in /opt/red540. All the following information will be based on this directory.
Call to our folder of installation red540

Make the folder:

mkdir /opt/red540

cd /opt/red540

...download the OpenMeetings file:

wget http://apache.miloslavbrada.cz/openmeetings/4.0.0/bin/apache-openmeetings-4.0.0.zip

unzip apache-openmeetings-4.0.0.zip

...save the unloaded file to /opt:

mv apache-openmeetings-4.0.0.zip /opt

Do to **nobody** owner of the whole OpenMeetings folder installation:

chown -R nobody /opt/red540

Unload and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.45/mysql-connector-java-5.1.45.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.45.jar /opt/red540/webapps/openmeetings/WEB-INF/lib

Now we are going to form OpenMeetings for our database in MariaDB:

gedit /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql_persistence.xml

Modifique la linea 72:

, Url=jdbc:mysql://localhost:3306/openmeetings?

...a

, Url=jdbc:mysql://localhost:3306/open40?

...it is the name of the database that we did initially.

If initially you chose another name for the database, please type it here. Save changes.

We protect the access to the file:

(Only one line without space between both)

chmod 640 /opt/red540/webapps/openmeetings/WEB-INF/classes/META-INF/mysql_persistence.xml

9)
------ Script to launch red5-OpenMeetings ------

Please, unload the red5 run script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-ubdeb2

...and copy it to:

cp red5-ubdeb2 /etc/init.d/

Concede permission of execution:

chmod +x /etc/init.d/red5-ubdeb2

10)
------ Run red5-OpenMeetings ------

Start MariaDB if still it is not:

/etc/init.d/mysql start

...and now start red5-OpenMeetings:

/etc/init.d/red5-ubdeb2 start

...will appear two text lines in the shell:

> start-stop-daemon: --start needs --exec or --startas
> Try 'start-stop-daemon --help' for more information.

...you do nothing. Don´t worry, everything work right.

Wait 40 seconds at least, in order that red5 it is runing completely, and after can go to:

> http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:
Press [>] button, (bottom), and will show the default configuration with Derby, but we

employ MySQL (MariaDB):

...then, scroll and **Choose DB type** to MySQL:

...and will show the data base configuration we made in step 8.

 If you`ve choose any other different name for this, will show equally.
Now we must introduce the user name we did for our data base, at the step 7, and his password:
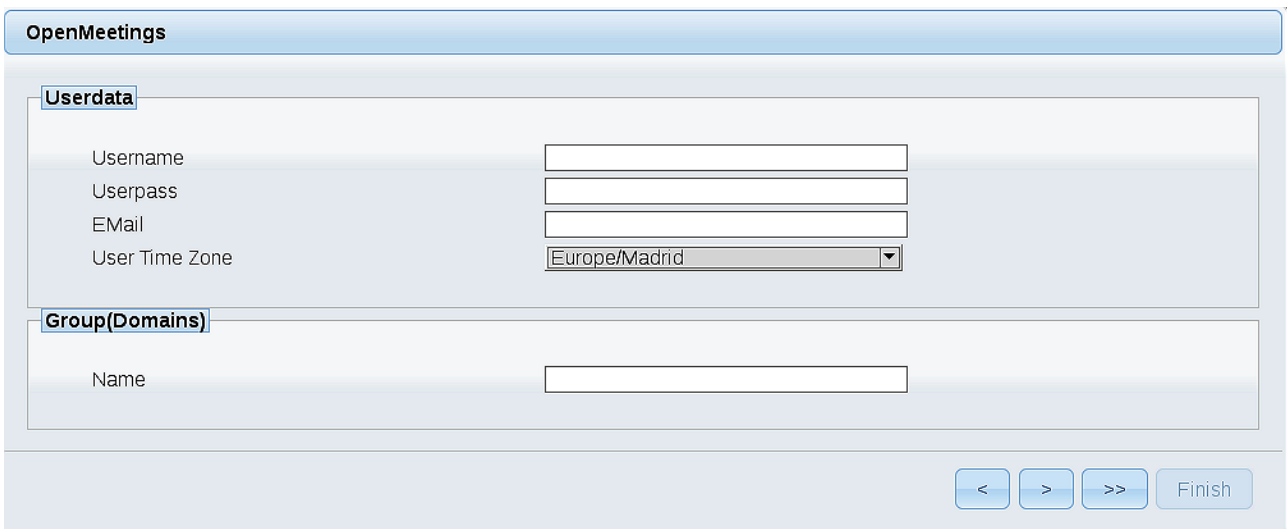

Specify DB user   =   hola

Specify DB password   =   1a2B3c4D

...if you choose a differents data, type it here.

Please, press   `>`   button, and will go to:

OpenMeetings	
Userdata	
Username	
Userpass	
EMail	
User Time Zone	Europe/Madrid
Group(Domains)	
Name	

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: + (% # !   ...etc.

Username =   a-name ...this user will be administrator.

Userpass =   password ...for the previous user.

Email   =   email-adress ...of the previous user.

User Time Zone = country where is this server.

Name   =   example-openmeetings ...group name to choose.

Press the button   `>`   and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

A valid example to configure the mail server with Gmail, is as follows:
(replace **john@gmail.com** with your real Gmail account)
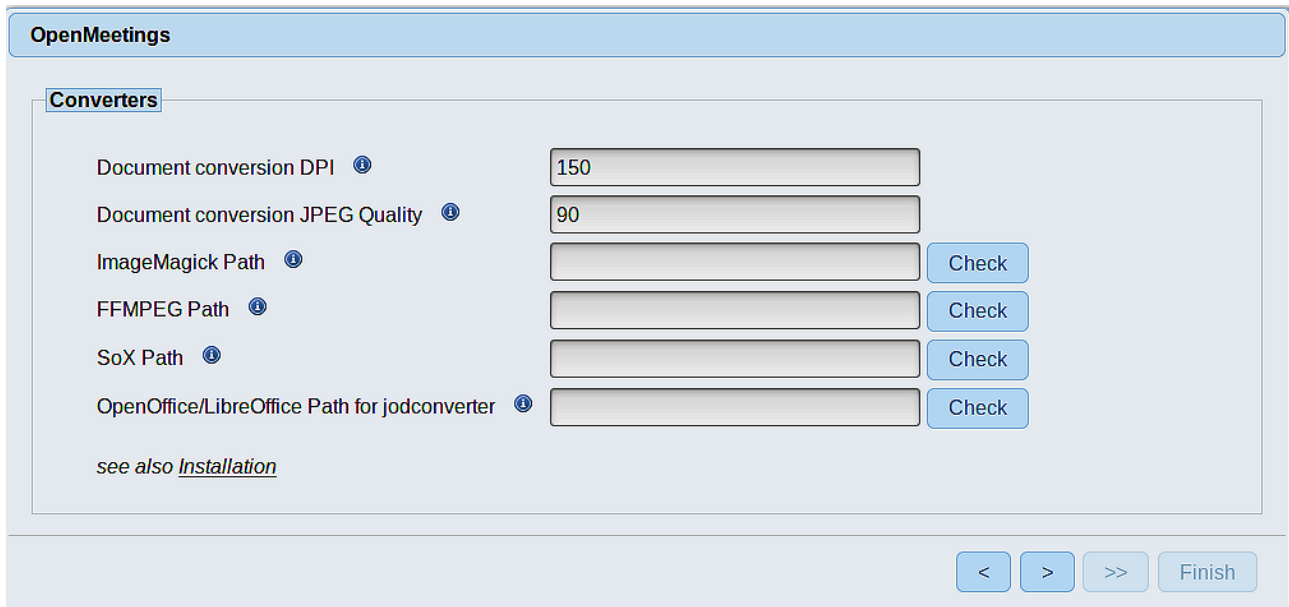

Mail-Refer	==	ohn@gmail.com
SMTP-Server	==	smtp.gmail.com
SMTP-Server Port (default Smtp-Server Port is 25)	==	587
SMTP-Username	==	john@gmail.com
SMTP-Userpass	==	password of john@gmail.com
Enable TLS in Mail Server Auth	==	...turn green the button to activate

To select the language of your server OpenMeetings, please scroll on the line:

Default Language	==	...select your language

...the rest you can change it as you like.

Now press the button [>] and a new page will appear:

OpenMeetings

Converters	
Document conversion DPI ⓘ	150
Document conversion JPEG Quality ⓘ	90
ImageMagick Path ⓘ	[ ] Check
FFMPEG Path ⓘ	[ ] Check
SoX Path ⓘ	[ ] Check
OpenOffice/LibreOffice Path for jodconverter ⓘ	[ ] Check
see also *Installation*	

[<] [>] [>>] [Finish]

Here we´ll introduce the respective paths for the image, video, audio and conversion of uploaded files:

ImageMagick Path   ==   /usr/bin

FFMPEG Path   ==   /usr/local/bin

SOX Path   ==   /usr/local/bin

OpenOffice/LibreOffice Path for jodconverter   ==   /usr/lib/libreoffice   **(32 y 64bits)**

As you go introducing paths, you can check if they are correct by pressing the button labeled **Check**. If it does not display any error message, that is OK.

Once completed the paths, please click the [>] button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

OpenMeetings	
Crypt Type	
Crypt Class ⓘ	org.apache.openmeetings.util.crypt.SCr
red5SIP Configuration	
Enable SIP ⓘ	▉▉
SIP rooms prefix ⓘ	400
SIP extensions context ⓘ	rooms
	< > >> Finish

Now push the button   `>`   Will show this window:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Press **Finish** button ...wait a seconds untill the tables are fill in the database.

When has concluded, this another page will appear. Don´t clic on **Enter the Application**.
First is need it to restart the server:

/etc/init.d/red5-ubdeb2 restart
Now yes, you can clic on **Enter the Application**, or go with your browser to:

http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Introduce the user's name and the password that you have chosen during the installation, push **Sign in** button and…

...Congratulations!

The next time that you like to accede to OpenMeetings would be:

http://localhost:5080/openmeetings

Remember to open in the server the two following ports:

1935   5080

...in order that it could accede to OpenMeetings from other machines.

11)

------ OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

Administration → Configuration
...and following the order of the red arrows:

And this is all.

If you have some doubt or question, please, raise it in the Apache OpenMeetings forums:

http://openmeetings.apache.org/mail-lists.html

Thank you.

Alvaro Bustos
