

Installation of Apache OpenMeetings 4.0.2 on Mageia 6

Mageia-6-x86_64-DVD.iso

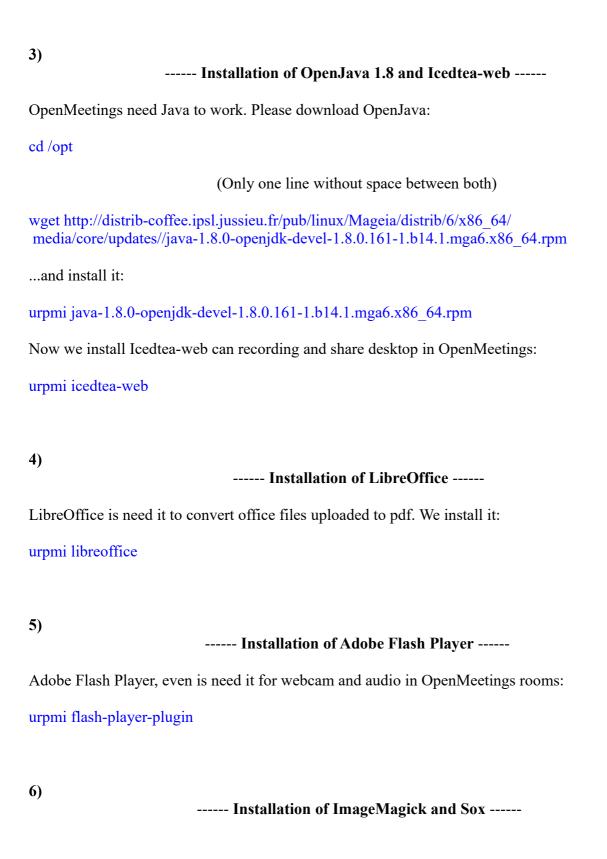

It is tested with positive result. We will use the Apache's binary version OpenMeetings 4.0.2 stable, that is to say will suppress his compilation. It is done step by step.

25-2-2018

Starting	
1)	
Update the OS:	
urpmi.update -a	
urpmiauto-update	
2)	Installation of libraries and packages

(Only one line with space between each one)

urpmi libjpeg-progs giflib-progs freetype-devel nano gcc-c++ libtool bison file-roller ghostscript freetype unzip gcc ncurses make bzip2 wget ghostscript ncurses git make automake pavucontrol freetype2 curl

ImageMagick, work with image files jpg, png, gif, etc. We install it: urpmi ImageMagick Sox, work the sound. We install it: urpmi sox 7) ----- Compiling and installing FFmpeg -----To compile and install ffmpeg, i've followed a guide with somes modifications. Files updated 25-2-2018: https://trac.ffmpeg.org/wiki/CompilationGuide/Centos We install some libraries and packets: (Only one line without space between both) urpmi libmp3lame-devel freetype2-devel autoconf automake bzip2 cmake freetype-devel gcc gccc++ git libtool make mercurial pkgconfig zlib-devel Download the script that will compile ffmpeg: cd /opt wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-mageia.sh ...concede execution permission: chmod +x ffmpeg-mageia.sh ...and runn it (be connected to Internet): ./ffmpeg-mageia.sh The compilation spend about 25 minutes. When finish will show this text: FFmpeg Compilation is Finished!

FFmpeg is installed in: /usr/local/bin

```
8)
                  ----- Installation of MySQL and building database -----
We'll employ MariaDB data server. Install it:
urpmi mariadb
...run MariaDB:
systemctl start mysqld.service
... do a mysql upgrade:
mysql upgrade
...and give a root password in MariaDB:
mysql secure installation
 ...will ask some questions:
...Enter current password for root (enter for none)..... press Enter
...Set root password [Y/n] ...... press Enter
...New password: .....type a password that you like
...Re-enter new password: ...... type again the same password
...Remove anonymous users? [Y/n] ..... press Enter
...Disallow root login remotely? [Y/n] ...... press Enter
...Remove test database and access to it? [Y/n] ...... press Enter
...Reload privilege tables now? [Y/n] ..... press Enter
Now we make a database in MariaDB for OpenMeetings:
mysql -p -u root
...will ask for password (you just made right now) type it and make the database:
MariaDB [(none)]> CREATE DATABASE open402 DEFAULT CHARACTER SET 'utf8';
                       (Only one line with space between both)
```

MariaDB [(none)]>	GRANT ALL PRIVILEGES ON open402.*	TO 'hola'@'localhost'
IDENTIFIED BY 'P	Pruv dw8' WITH GRANT OPTION;	

...and exit MariDB:

MariaDB [(none)]> quit

- * open402 is the database name
- * hola is the user name for this data bas
- * Pruv dw8 is the password for this user

You are free to change these names and password, but remember them. Later we'll need it. The password must be of 8 digits and have:

- 1 numeric character
- 1 lowercase character
- 1 uppercase character, and
- 1 special (nonalphanumeric) character.

Now we'll open MariaDB port 3306, so OpenMeetings can connect with it:

nano /etc/my.cnf

...and comment the line 51:

skip-networking

...modify it so:

skip-networking

...press Ctrl+x keyboard, and when ask press Y and Enter, to save changes and exit nano editor:

Restart MariaDB:

systemctl restart mysqld.service

9)

----- Installation of Apache OpenMeetings -----

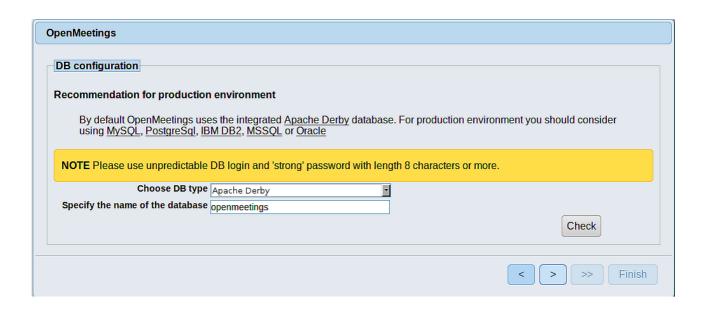

We'll install the 4.0.2 stable release.

Make a folder called red5402 where download the Apache OpenMeetings file and where make the installation:

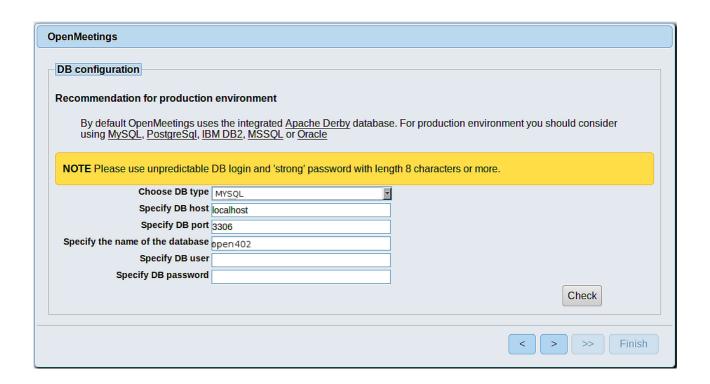

```
mkdir /opt/red5402
cd/opt/red5402
wget http://apache.miloslavbrada.cz/openmeetings/4.0.2/bin/apache-openmeetings-4.0.2.zip
unzip apache-openmeetings-4.0.2.zip
mv apache-openmeetings-4.0.2.zip/opt
10)
                              ----- Connector Java MariaDB -----
This file-driver is need it to connect OpenMeetings with MariaDB. Download and install it:
cd /opt
                            (Only one line without space between both)
wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.45/mysql-connector-java-
5.1.45.jar
cp mysql-connector-java-5.1.45.jar/opt/red5402/webapps/openmeetings/WEB-INF/lib
11)
                        ----- Script to launch red5-OpenMeeting -----
We download the script that will run red5-OpenMeetings:
cd /opt
wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-2
...copy it to where must be:
cp red5-2 /etc/init.d/
...and concede execution permission:
chmod +x /etc/init.d/red5-2
If you made the installation in other path, please edit the script and modify the line:
```

RED5_HOME=/opt/red5402	
to	
RED5_HOME=/your-path-installation	
12) Run red5-OpenMeetings	
Restart MariaDB (be connected to Internet):	
systemetl restart mysqld.service	
and start red5-OpenMeetings (be connected to Internet):	
/etc/init.d/red5-2 start	
wait untill the text "Rss disabled by Admin", it is the last in the shell. Then, go with the browser to:	
http://localhost:5080/openmeetings/install	
there will appear a page similar to this one:	
OpenMeetings	
1. Enabling import of PDFs into whiteboard Install GhostScript on the server, you can get more information on http://pages.cs.wisc.edu/~ghost/ regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it).	
If you have further questions or need support in installation or hosting:	
Community-Support:	
Mailing lists	
Commercial-Support:	
<u>Commercial-Support</u>	
< > >> Finish	

Press the button (bottom), and will show the default database configuration with Derby, but we employ MySQL (MariaDB):

...so, please scroll and Choose DB type to MySQL:

...we must introduce the database name, user and password we did for our data base, at the step 8:

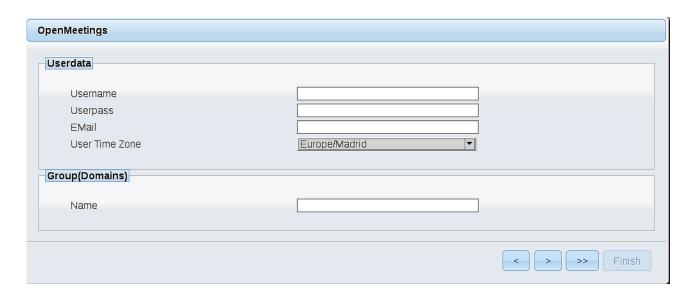

Specify the name of the databasre = open402

Specify DB user = hola

Specify DB password = Pruv_dw8

if you choose a different data, here is where type it.

Please, press button, and will go to:

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: + (% #! ...etc.

Username = a-name ...this user will have administrator rights

Userpass = a-passwordfor the previous user

EMail = email-adress ... of the previous user.

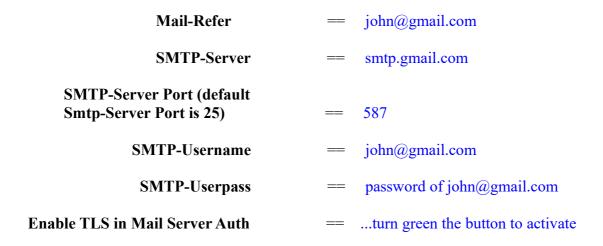

User Time Zone = country where is this server

Name = example-openmeetings ...group name to choose

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

OpenMeetings	
Configuration	
Allow self-registering Send Email to new registered Users	
New Users need to verify their EMail Default DB objects of all types will be created (including Rooms, OAuth2 servers etc.)	
Mail-Referer Mail-Referer	noreply@openmeetings.apache.org
SMTP-Server	localhost
SMTP-Server Port(default Smtp-Server Port is 25)	25
SMTP-Username	
SMTP-Userpass	
Enable TLS in Mail Server Auth	
Set inviter's email address as ReplyTo in email invitations	
Default Language	inglés
	< > >> Finish

A valid example to configure the mail server with Gmail, is as follows: (replace john@gmail.com with your real Gmail account)

To select the language of your server OpenMeetings, please scroll on the line:

Default language == ...select your language

...the rest you can modify it as you like.

Now press the button and a new page will appear:

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

ImageMagick Path == /usr/bin

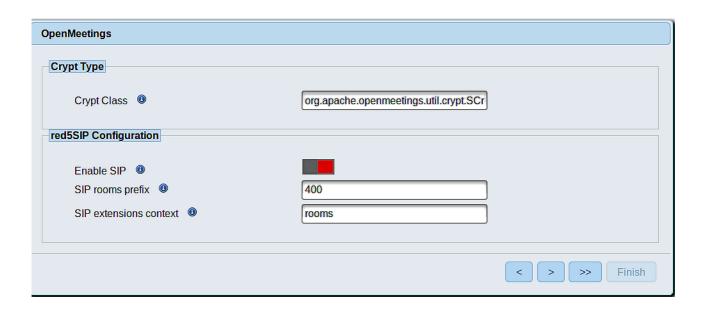

FFMPEG Path == /usr/local/bin

SOX Path == /usr//bin

OpenOffice/LibreOffice Path for jodconverter == /usr/lib64/libreoffice

As you go introducing paths, you can check if they are correct by pressing the button labeled Check. If it does not display any error message, that is OK.

Once completed the paths, please press the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

Press Finish button ...wait a seconds untill the tables are fill in the database.

When has concluded, this another page will appear. Don't clic on Enter the Application. First is need it to restart the server. Please, open a new shell window, and run this command (be connected to Internet):

/etc/init.d/red5-2 restart

Now yes, you can clic on **Enter the Application**, or go with your browser to:

http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Introduce the user's name and the password that you have chosen during the installation, push **Sign in** button, and...

... Congratulations!

The next time that you like to accede to OpenMeetings will be:

http://localhost:5080/openmeetings

Remember to open in the server the two following ports:

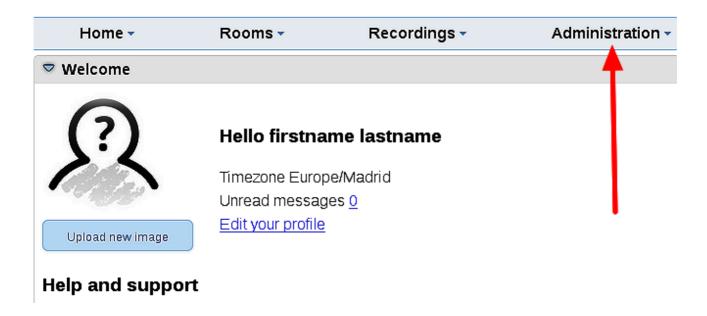

1935 5080

...in order that it could accede to OpenMeetings from other machines, in Lan or Internet.

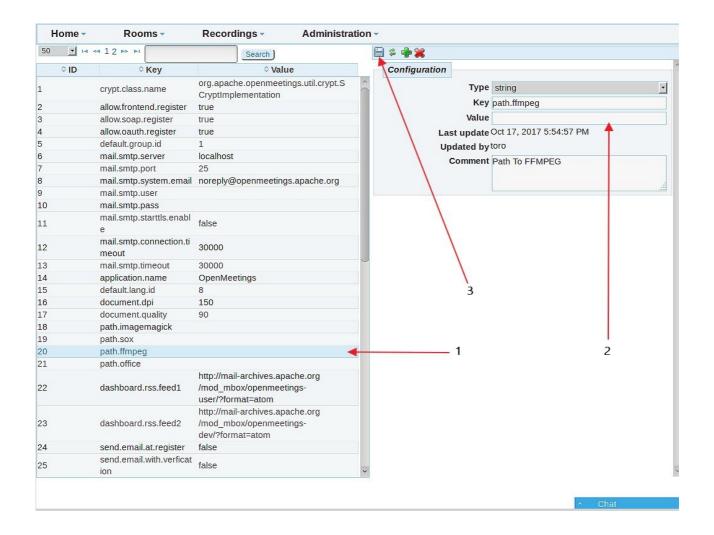

13) ----- Configuration of OpenMeetings -----

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

$\textbf{Administration} \rightarrow \textbf{Configuration}$

...and following the order of the red arrows:

And this is all.

If you have some doubt or question, please raise it in Apache OpenMeetings forums

http://openmeetings.apache.org/mail-lists.html

Thank you.

Alvaro Bustos
