

### Installation of Apache OpenMeetings 4.0.7 on Centos 6.10

This tutorial is made based on fresh installations of

### CentOS-6.9-x86\_64-LiveDVD.iso

It is tested with positive result. We will use the Apache's binary version OpenMeetings 4.0.7 stable, that is to say will suppress his compilation. It is done step by step.

1-1-2019

Starting...

1)

yum install -y gedit wget

At first place we must modify Selinux level security for the installation:

sudo gedit /etc/selinux/config

...modify:

SELINUX=enforcing

...to

### SELINUX=permissive

2)

----- Update the System -----

Update operative system:

yum update -y

...and reboot for the kernel changes and the new **Selinux** configuration take effect.:

reboot

3)

----- ADD Repos ------

### Add the **Epel** repository ###

For Centos 6.x 32bit

cd /opt

wget http://dl.fedoraproject.org/pub/epel/6/i386/epel-release-6-8.noarch.rpm

rpm -Uvh epel-release-6-8.noarch.rpm

For CentOS 6.x 64bit:

cd /opt

wget http://dl.fedoraproject.org/pub/epel/6/x86\_64/epel-release-6-8.noarch.rpm

rpm -Uvh epel-release-6-8.noarch.rpm

### Añadimos el repositorio linuxtech (32 y 64 bits) ###

...para la instalación de vlc, reproductor de video para las futuras grabaciones que hagamos en OpenMeetings.:

cd /opt

### cp linuxtech.repo /etc/yum.repos.d

### ### Adobe repo 32bit ## For Flash Player.

rpm -ivh http://linuxdownload.adobe.com/adobe-release/adobe-release-i386-1.0-1.noarch.rpm rpm --import /etc/pki/rpm-gpg/RPM-GPG-KEY-adobe-linux

### Adobe repo 64bit ### For Flash Player.

rpm -ivh http://linuxdownload.adobe.com/adobe-release/adobe-release-x86\_64-1.0-1.noarch.rpm rpm --import /etc/pki/rpm-gpg/RPM-GPG-KEY-adobe-linux yum update

### 4)

### ----- Installation of OpenJava 1.8 ------

Java **1.8** it is necessary to work OpenMeetings **4.0.7**. We install OpenJava:

yum install -y java-1.8.0-openjdk

...and icedtea-web for can access to record and share desktop in OpenMeetings:

yum install -y icedtea-web

Maybe you have installed various versions of Java. We select the just installed OpenJava:

update-alternatives --config java

And to see if the selected version is active:

java -version

5)

### ----- Installation of LibreOffice -----

OpenMeetings will need LibreOffice to convert to pdf the uploaded office files.

We install it:

6)

yum -y install libreoffice libreoffice-headless

----- Installation of Ghostscript, necessary packages and libraries -----

We install packages and libraries that we'll need later:

(Only one line with space between 1<sup>a</sup> and 2<sup>a</sup>)

yum install -y libjpeg libjpeg-devel ghostscript freetype freetype-devel unzip gcc gcc-c++ ncurses ncurses-devel make zlib zlib-devel libtool bison bison-devel openssl-devel bzip2 bzip2-devel fileroller git autoconf automake pkgconfig tomcat-native nmap nano

By a script we should compile Ghostscript 9.26, free of security hole:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ghostscript.sh

chmod +x ghostscript.sh

...and run it:

./ghostscript.sh

...when be finished will announce it: GhostScript compilation is Finished!

rm -Rf /opt/ghostscript-9.26

7)

### ----- Installation ImageMagick and Sox -----

ImageMagick, work the images files jpg, png, gif, etc. We install it and some libraries:

yum install -y ImageMagick giflib giflib-devel giflib-utils

Sox, work the sound. Will compile and install it:

wget http://ftp.icm.edu.pl/packages/sox/14.4.2/sox-14.4.2.tar.gz

tar xzvf sox-14.4.2.tar.gz

cd /opt/sox-14.4.2

./configure

make && make install

cd /opt

8)

### ----- Installation of Adobe Flash Player -----

OpenMeetings even need Adobe Flash Player for cam and audio.

yum install -y flash-plugin

9)

### ----- Compilation of FFmpeg ------

FFmpeg will work with video. Will install a libraries and vlc to play the recordings.

yum install -y glibc alsa-lib-devel faac faac-devel faad2 faad2-devel gsm gsm-devel imlib2 imlib2devel lame-devel vorbis-tools theora-tools libvpx-devel vlc cmake mercurial nasm curl git

This ffmpeg compilation is based on this url, and the file versions are updated 1-1-2019:

### https://trac.ffmpeg.org/wiki/CompilationGuide/Centos

Download the script i've made, to compile and install ffmpeg on Centos 6.10. It is tested and is ok.

The result of any recording we do in OpenMeetings, will be in mp4 format.

Will spend about 30 minutes the complete compilation. When is finished, a text will announce it:

### FFmpeg Compilation isFinished!

So, we download the script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg\_centos6.sh

...concede execution perrmission to it:

### chmod +x ffmpeg\_centos6.sh

...and run it (be connected to Internet).

./ffmpeg\_centos6.sh

When be finished, please, go to step 10).

All the compiled files will be installed in: /usr/local/bin

10)

### ----- Installation MariaDB database server -----

We build a file-repository to download MariaDB data server.

### -- For Centos 6.x 32bit ---:

sudo gedit /etc/yum.repos.d/MariaDB.repo

...copy and paste:

[mariadb] name = MariaDB baseurl = http://yum.mariadb.org/10.0/centos6-x86 gpgkey=https://yum.mariadb.org/RPM-GPG-KEY-MariaDB gpgcheck=1

### -- For Centos 6.x 64bit ---:

### sudo gedit /etc/yum.repos.d/MariaDB.repo

... copy and paste in:

```
[mariadb]
name = MariaDB
baseurl = http://yum.mariadb.org/10.0/centos6-amd64
gpgkey=https://yum.mariadb.org/RPM-GPG-KEY-MariaDB
gpgcheck=1
```

We install it:

yum -y install MariaDB-server MariaDB-client

...make a backup of the configuration file; and make a newone:

mv /etc/my.cnf /etc/my.bak

cp /usr/share/mysql/my-medium.cnf /etc/my.cnf

...and run MariaDB server:

service mysqld start

Give a password to mariadb root . Please, replace new-password by your own whish.

mysqladmin -u root password new-password

Make a database for OpenMeetings. User password must be of 8 digits minimum:

mysql -u root -p

...will ask for the root password we does just now:

MariaDB [(none)]> CREATE DATABASE open407 DEFAULT CHARACTER SET 'utf8';

With this command, we has created a database called open407, though you can choose another name to your whish.

Now we create a user with all the permission on this open407 database.

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open407.\* TO 'hola'@'localhost' IDENTIFIED BY 'la2B3c4D' WITH GRANT OPTION;

- \* open407 ..... name of the database
- \* hola ..... user for that database
- \* 1a2B3c4D .....password of that user

You can change the data...but remember it! Later we'll need it.

Leave MariaDB:

MariaDB [(none)]> quit

## ----- Installation of OpenMeetings ------

We'll install OpenMeetings in /opt/red5407. All the following information will be based on this directory.

Call to our folder of installation red5407.

Make the folder:

mkdir /opt/red5407

cd /opt/red5407

...and download the OpenMeetings file:

wget http://archive.apache.org/dist/openmeetings/4.0.7/bin/apache-openmeetings-4.0.7.zip

unzip apache-openmeetings-4.0.7.zip

...save the unloaded file to /opt:

mv apache-openmeetings-4.0.7.zip /opt

Download and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

### wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.47/mysql-connector-java-5.1.47.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.47.jar /opt/red5407/webapps/openmeetings/WEB-INF/lib

### 12)

----- Script to launch red5-OpenMeetings ------

We'll download the script to run Red5-OpenMeetings:

cd /opt

### 11)

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-2

...copy it to where must be:

cp red5-2 /etc/init.d/

...concede execution permission:

chmod +x /etc/init.d/red5-2

If you made the installation in any other different path to /opt/red5407, please edit the script and modify the line:

RED5 HOME=/opt/red5407

...to

RED5\_HOME=/your-path-installation

13)

----- Run red5-OpenMeetings ------

Restart mariadb:

service mysqld restart

...and run red5-OpenMeetings. Please, be connected to Internet, so the run will be quick:

/etc/init.d/red5-2 start

...wait about 40 seconds for running red5 completly. Then, go with the browser to:

http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:

Pag	9
-----	---

OpenMeetings
<ul> <li>1. Enabling import of PDFs into whiteboard         <ul> <li>Install GhostScript on the server, you can get more information on <u>http://pages.cs.wisc.edu/~ghost/</u> regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it).</li> </ul> </li> </ul>
If you have further questions or need support in installation or hosting:
Community-Support:
Mailing lists
Commercial-Support:
Commercial-Support
< > >> Finish

...press on solution (bottom), and will show the default database configuration with Derby,

but we employ MySQL (MariaDB):

OpenMeetings
DB configuration
Recommendation for production environment
By default OpenMeetings uses the integrated <u>Apache Derby</u> database. For production environment you should consider using <u>MySQL</u> , <u>PostgreSql</u> , <u>IBM DB2</u> , <u>MSSQL</u> or <u>Oracle</u>
NOTE Please use unpredictable DB login and 'strong' password with length 8 characters or more.
Choose DB type Apache Derby  Specify the name of the database openmeetings
Check
< > Finish

...then, scroll and Choose DB type to MySQL:

OpenMeetings	
DB configuration	
Recommendation for production e	nvironment
By default OpenMeetings uses using <u>MySQL</u> , <u>PostgreSql, IBM</u>	the integrated <u>Apache Derby</u> database. For production environment you should consider <u>DB2</u> , <u>MSSQL</u> or <u>Oracle</u>
	B login and 'strong' password with length 8 characters or more.
Choose DB type N	IVSQL
Specify DB host lo	calhost
Specify DB port 33	306
Specify the name of the database or	penmeetings
Specify DB user	
Specify DB password	
	Check
	< > >> Finish

Here we must introduce the database name, user name and his password we did at the step 10:

Specify the name of the database	=	open407
Specify DB user =	=	hola
Specify DB password	=	1a2B3c4D

Please, press

>

button, and we'll go to:

OpenMeetings		
Userdata		
Username		
Userpass		
EMail		
User Time Zone	Europe/Madrid	
Group(Domains)		
Name		
		< > >> Finish

Now, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: +(% # ! ... etc.)

Username =	a-namethis user will be administrator.			
Userpass =	a-password for the previous user.			
Email =	email-adress of the previous user.			
<b>User Time Zone</b> = country where is this server				
Name =	example-openmeetingsgroup name to choose.			

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings.

OpenMeetings	
Configuration	
Allow self-registering Send Email to new registered Users	
New Users need to verify their EMail Default DB objects of all types will be created (including Rooms, OAuth2 servers etc.)	
Mail-Referer	noreply@openmeetings.apache.org
SMTP-Server	localhost
SMTP-Server Port(default Smtp-Server Port is 25)	25
SMTP-Username	
SMTP-Userpass	
Enable TLS in Mail Server Auth	
Set inviter's email address as ReplyTo in email invitations	
Default Language	inglés 🗸
	< > >> Finish

A valid example to configure the mail server with Gmail, is as follows:

(replace john@gmail.com with your real Gmail account)

Mail-Refer	==	john@gmail.com
SMTP-Server		smtp.gmail.com
SMTP-Server Port (default Smtp-Server Port is 25)	==	587
SMTP-Username	==	john@gmail.com
SMTP-Userpass		password of john@gmail.com
Enable TLS in Mail Server Auth	==	turn green the button to activate
Default Language	==	select your language

Now press the button  $\geq$  and a new page will appear:

OpenMeetings		
Converters		
Document conversion DPI 0	150	
Document conversion JPEG Quality 0	90	
ImageMagick Path 🐠		Check
FFMPEG Path 🔞		Check
SoX Path 📵		Check
OpenOffice/LibreOffice Path for jodconverter 0		Check
see also <u>Installation</u>		
		< > >> Finish

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

ImageMagick Path	==	/usr/bin	
FFMPEG Path	==	/usr/local/bin	
SOX Path	==	/usr/local/bin	
OpenOffice/LibreOffice Path for jodconverter		/usr/lib/libreoffice /usr/lib64/libreoffice	(32bits) (64bits)

Once completed the paths, please click the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

OpenMeetings		
Crypt Type Crypt Class 🐠	org.apache.openmeetings.util.crypt.SCr	
red5SIP Configuration Enable SIP (1)		
SIP rooms prefix   SIP extensions context	400 rooms	
		< > >> Finish

Now push the button s and will show this window:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Clic Finish button...wait a seconds untill the tables are fill in the database.

When has concluded, this another page will appear. Don't clic on <u>Enter the Application</u>. First is need it to restart the server. Please, be connected to Internet:

/etc/init.d/red5-2 restart

### OpenMeetings

# Enter the Application Database was changed, please restart application to avoid possible issues If your Red5-Server runs on a different Port or on a different domain alter the config values of the client Mailing list http://openmeetings.apache.org/mail-lists.html There are some companies that also offer commercial support for Apache OpenMeetings: http://openmeetings.apache.org/commercial-support.html I > > Finish

Now yes, you can clic on **Enter the Application**, or go with your browser to:

http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Login	
Username or mail address Password	
Forgotten your password?	□ Remember login <u>Network testing</u>
	Not a member? Sign in

Introduce the user's name and the password that you have chosen during the installation, push **Sign in** button, and...

### ...Congratulations!

The next time that you like to accede OpenMeetings, will be through:

### http://localhost:5080/openmeetings

Remember to open in the server, the two following ports:

### 1935 5080

... in order that it could accede to OpenMeetings from other machines in Lan or Internet.

# 14) ------ OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

### Administration $\rightarrow$ Configuration

Home 🗸	Rooms 🗸	Recordings 🗸	Administration -
▽ Welcome			<b>•</b>
<u>?</u>			
Upload new image			

...and following the order of the red arrows:

н	ome 🔻	Rooms -	Recordings - Administrat	ion <del>-</del>
50	<b>•</b> •	≪ 12 ↦ ы	Search )	🗎 🌣 🖶 💥
	≎ ID	≎ Key	⇒ Value	Configuration
