

## Installation of Apache OpenMeetings 6.3.0 on openSUSE Leap 15.4

This tutorial is made based on fresh installations of

openSUSE-Leap-15.4-DVD-x86 64.iso

My sincere thanks to Maxim Solodovnik for his help, without which i could not have finished this tutorial satisfactorily.

It is done step by step.

| Starting                 |                         |
|--------------------------|-------------------------|
|                          |                         |
| 1)                       | Update Operative System |
| Update operative system: |                         |
| su                       |                         |
| zypper refresh           |                         |
| zypper update            |                         |
|                          |                         |
| 2)                       | Installation of Java    |

Java is necessary to work Tomcat-OpenMeetings 6.3.0. So, we install OpenJava 17:

| Add OpenJava repo:   |
|--|
| zypper addrepo https://download.opensuse.org/repositories/home:ecsos/15.4/home:ecsos.repo  |
| refresh:   |
| zypper refresh   |
| and install OpenJava 17:   |
| zypper install java-17-openjdk   |
| export JRE_HOME=/usr/lib64/jvm/java-17-openjdk-17  |
| Now we'll see if is installed more than one java version. If it is, then please select our OpenJava 17   |
| update-alternativesconfig java   |
| and to see the active version:   |
| java -version  |
|  |
| 3) Installation of LibreOffice   |
| OpenMeetings need LibreOffice to convert to pdf, the uploaded office files.  |
| Maybe it is installed, but for iso server specially:   |
| zypper install -y libreoffice  |
|  |
| 4)   |
| Installation of necessary packages and libraries   |
| We install packages and libraries that we'll need later:   |
| (Only one line with space between both)  |
| zypper install -y gcc ghostscript unzip freetype freetype-devel ncurses ncurses-devel make libz1 zlib-devel libtool bzip2 file-roller git autoconf automake pkg-config nmap nano |
|  |
| 5) Installation ImageMagick and Sox  |

ImageMagick, will work with images files jpg, png, gif, etc. We install it and some librarie:

```
zypper install -y ImageMagick giflib-devel
```

We modify ImageMagick, so OpenMeetings can upload office files to whiteboard:

```
nano /etc/ImageMagick-7-SUSE/policy.xml
```

...and comment the two following lines near to bottom file:

```
<policy domain="coder" rights="none" pattern="PS" />
<policy domain="coder" rights="none" pattern="PDF" />
...to:

<!-- <policy domain="coder" rights="none" pattern="PS" /> -->
<!-- <policy domain="coder" rights="none" pattern="PDF" /> -->
```

Press in the keyboard **Ctrl+x**, will ask to save, press **Y**, and press **Enter** to exit nano editor. This last must be repeated every time you update ImageMagick.

Sox, work the sound. Install it:

```
zypper install -y sox
```

6) ----- Compilation of FFmpeg and installation of packman repo -----

FFmpeg work the video. We install Packman repository to can install some libraries:

zypper ar -cfp 90 http://ftp.gwdg.de/pub/linux/misc/packman/suse/openSUSE Leap 15.4/ packman

zypper update ...when ask, accept for allways typing the letter a and pressing Enter

(Only one line with space between both)

zypper install -y glibc imlib2 imlib2-devel mercurial cmake freetype2-devel libfreetype6 curl git vlc libvpx-devel libmp3lame-devel

This ffmpeg compilation is based in this url:

https://trac.ffmpeg.org/wiki/CompilationGuide/Centos

I made a script that will download, compile and install ffmpeg. Download the script: cd /opt wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg opensuse15.sh ...concede permission of execution: chmod +x ffmpeg opensuse15.sh ...and run it, be connected to Internet: ./ffmpeg opensuse15.sh Will spend about 20 minutes. When finish, will announce it with this text: ...FFmpeg Compilation is Finished! ...then, please go to step 7. All the compiled files will be installed in: /usr/local/bin 7) ----- Installation of MariaDB data base server -----MariaDB is the database server. We install it: zypper install -y mariadb mariadb-tools ...and run mariadb: systemctl start mysql.service Give a password to MariaDB root . Please, modify new-password by your own: mysqladmin -u root password new-password Make a database with his own user for OpenMeetings: mysql -u root -p ...will ask for the root-mariadb password that we have just chosen:

MariaDB [(none)] > CREATE DATABASE open630 DEFAULT CHARACTER SET 'utf8';

Now we create a user with all permission on this database:

(Only one line with space between both)

MariaDB [(none)]> GRANT ALL PRIVILEGES ON open630.\* TO 'hola'@'localhost' IDENTIFIED BY 'la2B3c4D' WITH GRANT OPTION;

- \* open630 .....is the database name.
- \* hola ......is the user name for the database.
- \* 1a2B3c4D ...is the password of this user.

You can change the data...but remember it! Later we'll need it.

Now, we leave MariaDB:

MariaDB [(none)]> quit

## 8) ----- Installation of OpenMeetings -----

We'll install OpenMeetings in /opt/open630. All the following information will be based on this directory.

cd /opt

...download the OpenMeetings file:

wget https://archive.apache.org/dist/openmeetings/6.3.0/bin/apache-openmeetings-6.3.0.tar.gz

...uncompress it:

tar xzvf apache-openmeetings-6.3.0.tar.gz

...and rename the obtained folder:

mv apache-openmeetings-6.3.0 open630

Download and install the connector file between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

| wget https://repo1.maven.org/maven2/mysql/mysql-connector-java/8.0.28/mysql-connector-java/8.0.28.jar                 |
|---|
| and copy it to where must be:   |
| cp /opt/mysql-connector-java-8.0.28.jar /opt/open630/webapps/openmeetings/WEB-INF/lib                                 |
|   |
| 9)  |
| Script to launch Tomcat-OpenMeetings  |
| We'll download the script to run Tomcat-OpenMeetings:   |
| cd /opt   |
| wget https://cwiki.apache.org/confluence/download/attachments/27838216/tomcat34                                       |
| copy it to where must be:   |
| cp tomcat34 /etc/init.d/  |
| concede execution permission:   |
| chmod +x /etc/init.d/tomcat34   |
|   |
| If you made the installation in any other different path to /opt/open630, please edit the script and modify the line: |
| CATALINA_HOME =/opt/open630   |
| to  |
| CATALINA_HOME =/your-path-installation  |
|   |
| 10) Run Tomcat-OpenMeetings   |
| Restart mariadb, (be connected to Internet):  |
| systemetl restart mysql.service   |
|   |

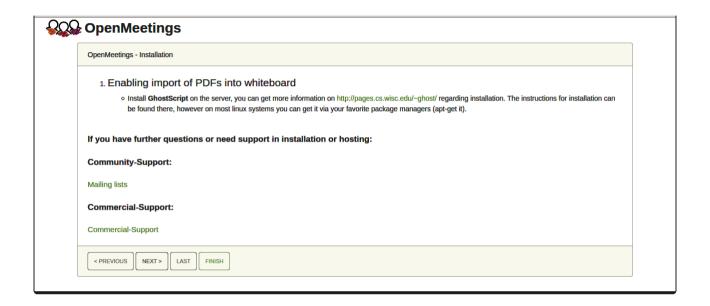

/etc/init.d/tomcat34 start

...and run tomcat-OpenMeetings, please, in a new window terminal:

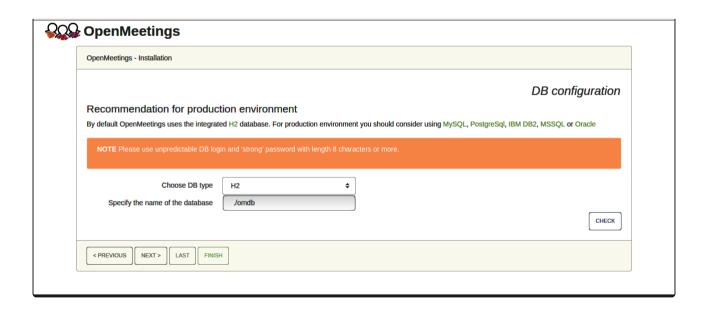

...wait about 40 seconds in order tomcat can run completly. Then, go with the browser to:

## https://localhost:5443/openmeetings/

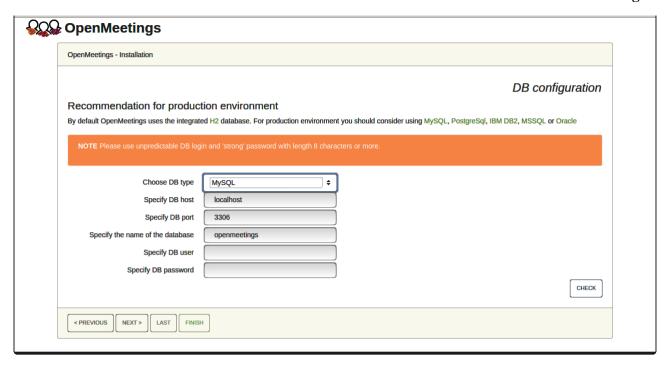

...there will appear a page similar to this one:

...press on "Next >" (bottom), and will show the default configuration with H2, but we employ MySQL (MariaDB):

...then, scroll and Choose DB type to MySQL:

Now we must introduce the database name, user name and his password, we did at the step 7:

```
Specify the name of the database = open630

Specify DB user = hola

Specify DB password = 1a2B3c4D
```

...if you choose any other data, please type it here.

Press "Next >" button, and will go to:

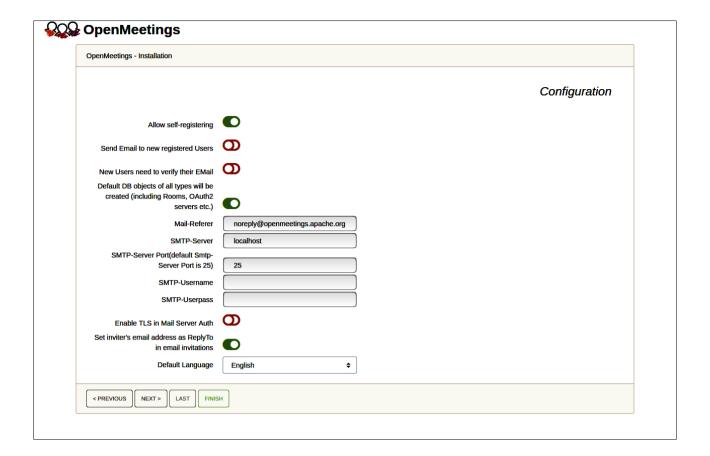

Pag 8

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: + ( % #! ...etc.

> a-name ...this user will be administrator. Username = **Userpass** a-password ...for the previous user. **Email** email-adress ... of the previous user. **User Time Zone** = country where is this server example-openmeetings ...group name to choose.

Press the button "Next >" and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

Name

A valid example to configure the mail server with Gmail, is as follows:

(replace john@gmail.com with your real Gmail account)

Pag 9

```
Mail-Refer = john@gmail.com

SMTP-Server = smtp.gmail.com

SMTP-Server Port (default Smtp-Server Port is 25) == 587

SMTP-Username = john@gmail.com

SMTP-Userpass == password of john@gmail.com

Enable TLS in Mail Server Auth == ...turn green the button to activate

Default Language == ...select your language
```

...the rest can modify it as you like.

Now press the button "Next >" and a new page will appear:

| OpenMeetings                                 |     |       |            |
|--|-----|-------|------------|
| OpenMeetings - Installation                  |     |       |            |
|  |     |       | Converters |
| Document conversion DPI 1                    | 150 |       |            |
| Document conversion JPEG Quality             | 90  |       |            |
| ImageMagick Path 1                           |     | CHECK |            |
| FFMPEG Path 1                                |     | CHECK |            |
| SoX Path 1                                   |     | CHECK |            |
| OpenOffice/LibreOffice Path for jodconverter |     | CHECK |            |
| see also Installation                        |     |       |            |
|  |     |       |            |
| < PREVIOUS NEXT > LAST FINISH                |     |       |            |
|  |     |       |            |

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

Pag 10

ImageMagick Path == ...here empty

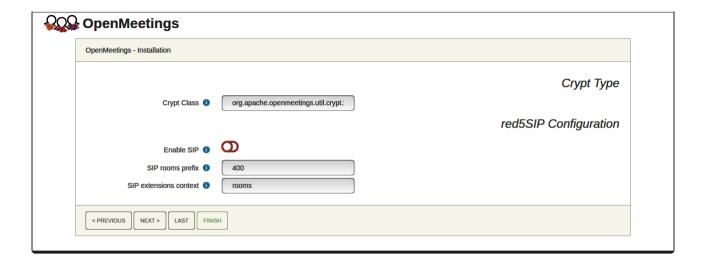

FFMPEG Path == /usr/local/bin

SOX Path == ...here empty

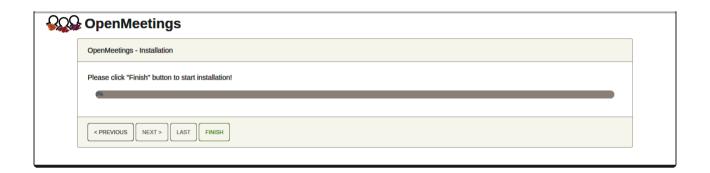

OpenOffice/LibreOffice Path for jodconverter == /usr/lib64/libreoffice

As you go introducing paths, you can check if they are correct by pressing the button labeled **Check**.

Once completed the paths, please click the "Next >" button and move on to another page that we will leave it as is:

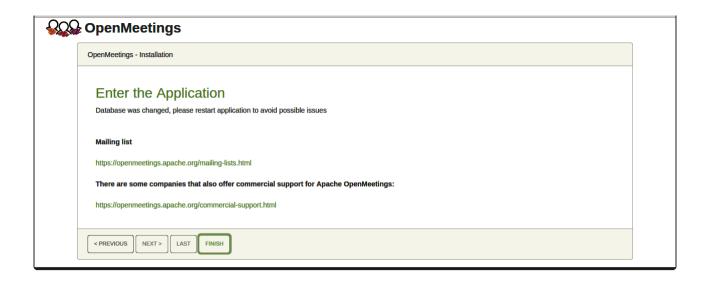

Now push the button "Next >" and will show this window:

Press "**Finish**" button...wait a seconds untill the tables are fill in the database. When has concluded, this another page will appear. Don't clic on <u>Enter the Application</u>. First is need it to restart the server. Please, open a new terminal and restart tomcat:

Pag 11

/etc/init.d/tomcat34 restart

Now you can click on Enter the Application and it will take you to the OpenMeetings entry. But wait before entering OpenMeetings, we have to install Docker and Kurento-Media-Server, something we will do in the next steps, so that you can have access to the camera, micro, recording and desktop sharing in the room.

Pag 12

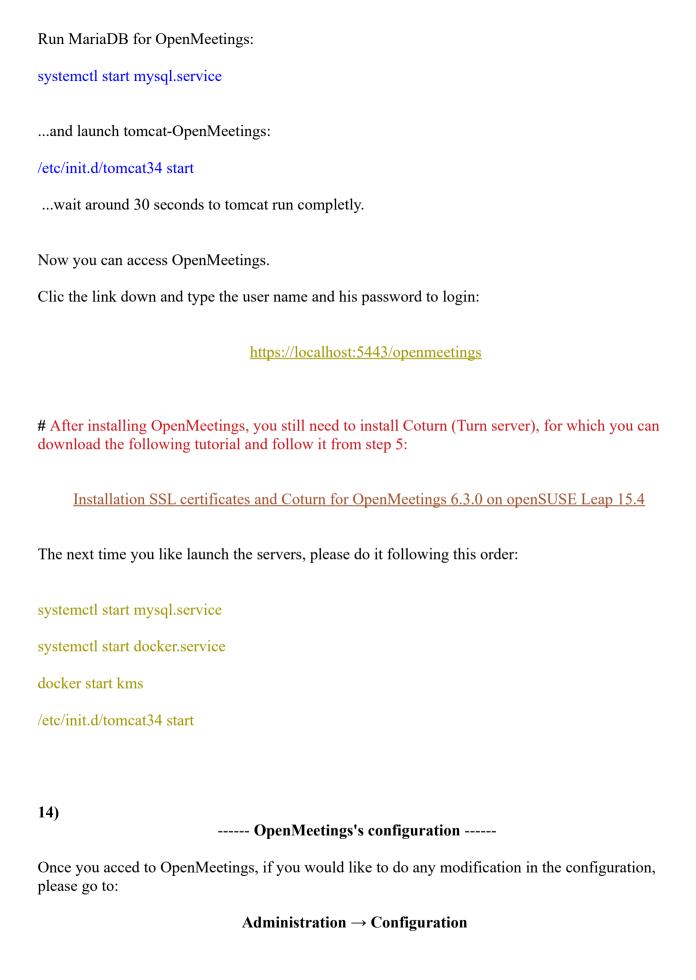

11)

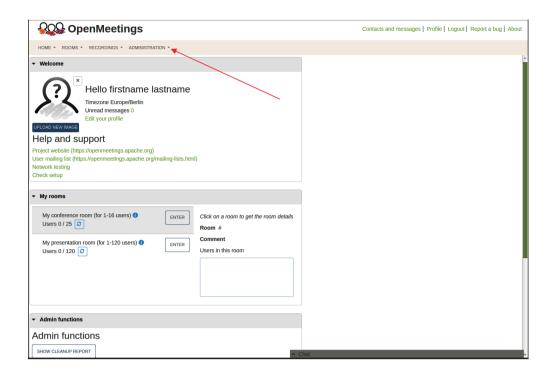

## ----- Installation of Docker -----

We'll install Docker as recipient for kurento-media-server.

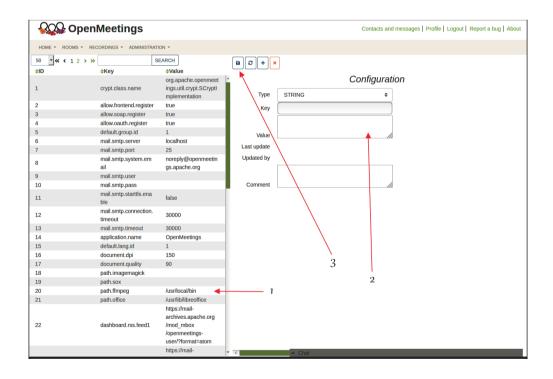

zypper install -y docker

Add your user system to docker group and so can run docker without be root. Replace user by your real system user name: gpasswd -a user docker ...stop OpenMeetings, MariaDB and Docker: /etc/init.d/tomcat34 stop systemctl stop mysql.service systemctl stop docker.service ...and reboot the machine. After this, please follow in the step 13: reboot 12) ----- Installation of Kurento-Media-Server -----After had rebooted the computer, we'll install Kurento-Media-Server need it for cam, mic-audio, recordings and share dektop. First run docker: systemetl start docker.service ...and now we'll install kurento-media-server. But first we'll create the folder where will be the video recorder files we should make in rooms, as well as the uploaded files and documents: mkdir -p /opt/om data ...and install kurento: (Only one line, with space between both) docker run -d --name kms -p 8888:8888 --mount type=bind,source=/opt/om data,target=/opt/om data kurento/kurento-media-server Run kurento-media-server: docker start kms

...and following the order of the red arrows:

-----

If you have some doubt or question, please raise it in the Apache OpenMeetings forums:

Also you can download if you like, a wallpaper of OpenMeetings for different devices such as:

PC, Mac, Smartphone, iPhone and Tablets. Here is the link to downoload:

OpenMeetings Wallpaper Download

A dvd live iso with OpenMeetings 6.3.0 on Ubuntu 18.04 lts, it is at your disposal.

Can find it here:

Live iso download

Thank you.

Alvaro Bustos (PMC and Committer at Apache OpenMeetings).
