StrutsLibraries

Here are some of the applications that use Struts:

JAMM - http://jamm.sourceforge.net - Postfix/LDAP mail administration utility

XDemo - http://www.demozone.org

- XMooN 0.7.5.1, Struts and Hibernate 3

Struts Applications Project - http://struts.sourceforge.net/

- example Struts applications,
- host Struts extensions and utilities
- host code for the Struts Community

basicPortal CMS forums and more with 10MM users for Ziff Davis beta site: http://www.ogamo.com

The ADF Toy Store Demo - http://otn.oracle.com/products/jdev/collateral/papers/10g/adftoystore.html -

- demonstrates Best Practises J2EE
- Struts as Controller
- JSP/JSTL as View
- ADF as Model

JSP Controls Tag Library - http://jspcontrols.sourceforge.net/
Supports the lifecycle and provides the template for portlet-like JSP components. The Library does not require a portal engine or other central controller.
The components built with the Library use Struts actions to process input data and to change component state.

- Supports dual-mode components (non-Ajax and Ajax) therefore works even with Netscape 4.
- In non-Ajax mode components utilize synchronous HTTP request/response cycle via Redirect-After-Post pattern.
- In Ajax mode components are updated in-place.
- Component reload in non-Ajax mode is completely automatic and transparent.
- Transition between Ajax and non-Ajax mode is undetectable when Javascript being switched on and off.
- Apache 2.0 licence.
- Live demo
- Short intro

Cold Fusion MX
