

StrutsMaintenanceValidWhenParser

The following files are generated by [Antlr](#) from the [ValidWhenParser.g](#) file

- [ValidWhenLexer.java](#)
- [ValidWhenParser.java](#)
- [ValidWhenParserTokenTypes.java](#)
- [ValidWhenParserTokenTypes.txt](#)

If any changes are made to [ValidWhenParser.g](#) then the above files should be re-generated using [Antlr](#). No changes should be made directly to any of the generated files.

Command to re-generate using Antlr:

```
java antlr.Tool ValidWhenParser.g
```

Note: Should we generate the above automatically in the build process, rather than have them checked into SVN?
