

# KIP-666: Add Instant-based methods to ReadOnlySessionStore

- [Status](#)
- [Motivation](#)
- [Public Interfaces](#)
- [Proposed Changes](#)
- [Compatibility, Deprecation, and Migration Plan](#)
- [Rejected Alternatives](#)

## Status

**Current state:** Adopted

**Vote thread:** [here](#)

**Discussion thread:** [here](#)

**JIRA:** [here](#)

Please keep the discussion on the mailing list rather than commenting on the wiki (wiki discussions get unwieldy fast).

## Motivation

Interactive-Query APIs are designed for usability. Instant-based methods were introduced in [KIP-358](#) to represent time ranges.

On the other hand, read-write interfaces used by Processor API are tuned for performance. Therefore, long-based methods are kept to avoid performance penalties caused by object allocation.

ReadOnlySessionStore API is misaligned with the improvements introduced into ReadOnlyWindowStore in [KIP-358](#).

This proposal aims to solve this issue, adding Instant-based alternative methods to the interactive query API for Session Stores.

[KIP-617](#) is already moving read methods from SessionStore into ReadOnlySessionStore

## Public Interfaces

- org.apache.kafka.streams.state.ReadOnlySessionStore
  - add method: KeyValueIterator<Windowed<K>, AGG> findSessions(final K key, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
  - add method: KeyValueIterator<Windowed<K>, AGG> findSessions(final K keyFrom, final K keyTo, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
  - add method: AGG fetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime)
  - add method: KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K key, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
  - add method: KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K keyFrom, final K keyTo, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
- org.apache.kafka.streams.state.SessionStore
  - add method with default implementation calling long-based method:
    - KeyValueIterator<Windowed<K>, AGG> findSessions(final K key, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
    - KeyValueIterator<Windowed<K>, AGG> findSessions(final K keyFrom, final K keyTo, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
    - AGG fetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime)
    - KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K key, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)
    - KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K keyFrom, final K keyTo, final Instant earliestSessionEndTime, final Instant latestSessionStartTime)

## Proposed Changes

Changes to ReadOnlySessionStore, considering new methods added on [KIP-617](#):

```
public interface ReadOnlySessionStore<K, AGG> {
    // Moving read functions from SessionStore to ReadOnlySessionStore
    KeyValueIterator<Windowed<K>, AGG> findSessions(final K key, final Instant earliestSessionEndTime, final
    Instant latestSessionStartTime);
```

```

    KeyValueIterator<Windowed<K>, AGG> findSessions(final K keyFrom, final K keyTo, final Instant
earliestSessionEndTime, final Instant latestSessionStartTime);

    AGG fetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime);

    // To be handled as part of KIP-617
    KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K key, final Instant earliestSessionEndTime,
final Instant latestSessionStartTime);

    KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K keyFrom, final K keyTo, final Instant
earliestSessionEndTime, final Instant latestSessionStartTime);
}

public interface SessionStore<K, AGG> extends ReadOnlySessionStore<K, AGG> {
    //Existing messages
    KeyValueIterator<Windowed<K>, AGG> findSessions(final K key,
                                                       final long earliestSessionEndTime,
                                                       final long latestSessionStartTime);

    KeyValueIterator<Windowed<K>, AGG> findSessions(final K keyFrom,
                                                       final K keyTo,
                                                       final long earliestSessionEndTime,
                                                       final long latestSessionStartTime);

    AGG fetchSession(final K key, final long sessionStartTime, final long sessionEndTime);

    //Default implementations
    @Override
    default KeyValueIterator<Windowed<K>, AGG> findSessions(final K key,
                                                               final Instant earliestSessionEndTime,
                                                               final Instant latestSessionStartTime) {
        return findSessions(
            key,
            ApiUtils.validateMillisecondInstant(earliestSessionEndTime, prepareMillisCheckFailMsgPrefix
(earliestSessionEndTime, "earliestSessionEndTime")),
            ApiUtils.validateMillisecondInstant(latestSessionStartTime, prepareMillisCheckFailMsgPrefix
(latestSessionStartTime, "latestSessionStartTime")));
    }

    @Override
    default AGG fetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime) {
        return fetchSession(
            key,
            ApiUtils.validateMillisecondInstant(sessionStartTime, prepareMillisCheckFailMsgPrefix
(sessionStartTime, "sessionStartTime")),
            ApiUtils.validateMillisecondInstant(sessionEndTime, prepareMillisCheckFailMsgPrefix(sessionEndTime,
"sessionEndTime")));
    }

    @Override
    default AGG fetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime) {
        return fetchSession(
            key,
            ApiUtils.validateMillisecondInstant(sessionStartTime, prepareMillisCheckFailMsgPrefix
(sessionStartTime, "sessionStartTime")),
            ApiUtils.validateMillisecondInstant(sessionEndTime, prepareMillisCheckFailMsgPrefix(sessionEndTime,
"sessionEndTime")));
    }

    // To be handled as part of KIP-617
    KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K key,
                                                               final long earliestSessionEndTime,
                                                               final long latestSessionStartTime);

    KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K keyFrom,
                                                               final K keyTo,
                                                               final long earliestSessionEndTime,
                                                               final long latestSessionStartTime);
}

```

```

        final long latestSessionStartTime);

@Override
default KeyValueIterator<Windowed<K>, AGG> backwardFindSessions(final K key,
                                                               final Instant earliestSessionEndTime,
                                                               final Instant latestSessionStartTime) {
    return backwardFindSessions(
        key,
        ApiUtils.validateMillisecondInstant(earliestSessionEndTime, prepareMillisCheckFailMsgPrefix
(earliestSessionEndTime, "earliestSessionEndTime")),
        ApiUtils.validateMillisecondInstant(latestSessionStartTime, prepareMillisCheckFailMsgPrefix
(latestSessionStartTime, "latestSessionStartTime")));
}

@Override
default AGG backwardFetchSession(final K key, final Instant sessionStartTime, final Instant sessionEndTime)
{
    return backwardFetchSession(
        key,
        ApiUtils.validateMillisecondInstant(sessionStartTime, prepareMillisCheckFailMsgPrefix
(sessionStartTime, "sessionStartTime")),
        ApiUtils.validateMillisecondInstant(sessionEndTime, prepareMillisCheckFailMsgPrefix(sessionEndTime,
"sessionEndTime")));
}
}

```

## Compatibility, Deprecation, and Migration Plan

- Custom IQ Session Stores will have to implement new methods if haven't implement read-write APIs yet.

## Rejected Alternatives

None yet.
